Abstract

Dohmen et al. (2010) describe in their paper, which has been published in the American Economic Review, that risk aversion and impatience are negatively related to cognitive ability. This topic is important because controlling for cognitive ability might be necessary if someone is interested in the link of risk preferences or time preferences to real-world outcomes. We re-examine their key results by conducting an experimental study using two subject pools (agricultural students and farmers) and three levels of monetary incentives. Similar to Dohmen et al. (2010), our study finds the above-described negative correlations. However, the strength of the association is relatively small in the realm of risk aversion and negligible with impatience.
