Operator Theory and Harmonic Analysis Alexey N. Karapetyants,Vladislav V. Kravchenko,Elijah Liflyand,Helmuth R. Malonek,2021-09-27 This volume is part of the collaboration agreement between Springer and the ISAAC society This is the first in the two volume series originating from the 2020 activities within the international scientific conference Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis OTHA Southern Federal University in Rostov on Don Russia This volume is focused on general

harmonic analysis and its numerous applications The two volumes cover new trends and advances in several very important fields of mathematics developed intensively over the last decade The relevance of this topic is related to the study of complex multiparameter objects required when considering operators and objects with variable parameters *M.G. Krein's Lectures on Entire Operators* Valentina Gorbachuk, 2012-12-06 This book is devoted to the theory of entire Hermitian operators an important branch of functional analysis harmoniously combining the methods of operator theory and the theory of analytic functions This theory enables various problems of classical and modern analysis to be looked at from a uniform point of view In addition it serves as a source for setting and solving many new problems in both theories The three chapters of the book are based on the notes written by his students of M G Krein's lectures on the theory of entire operators with 1 1 deficiency index which he delivered in 1961 at the Pedagogical Institute of Odessa and on his works on the extension theory of Hermitian operators and the theory of analytic functions The theory is further developed in the direction of solving the problems set up by Krein at ICM 66 in the first two appendices The first concerns the case of Hermitian operators with arbitrary defect numbers entire with respect to an ordinary gauge and to a generalized one as well The other focuses on the entire operators representable by differential operators The third appendix is the translation from Russian of the unpublished notes of Krein's lecture in which in particular the place of the theory of entire operators in the whole analysis is elucidated In Krein's mathematical heritage the theory of entire operators occupies a special position Mathematics of the USSR:

Complex Analytic Methods for Partial Differential Equations Heinrich G. W. Begehr, 1994 This is an introductory

text for beginners who have a basic knowledge of complex analysis functional analysis and partial differential equations Riemann and Hilbert boundary value problems are discussed for analytic functions for inhomogeneous Cauchy Riemann systems as well as for generalized Beltrami systems Related problems such as the Poincaré problem pseudoparabolic systems and complex elliptic second order equations are also considered Estimates for solutions to linear equations existence and uniqueness results are thus available for related nonlinear problems the method is explained by constructing entire solutions to nonlinear Beltrami equations Often problems are discussed just for the unit disc but more general domains even of multiply connectivity are involved Operator Theory and Boundary Eigenvalue Problems I. Gohberg, H.

Langer, 2012-12-06 The Workshop on Operator Theory and Boundary Eigenvalue Problems was held at the Technical University Vienna Austria July 27 to 30 1993 It was the seventh workshop in the series of IWOTA International Workshops on Operator Theory and Applications The main topics at the workshop were interpolation problems and analytic matrix functions operator theory in spaces with indefinite scalar products boundary value problems for differential and functional differential equations and systems theory and control The workshop covered different aspects starting with abstract operator theory up to concrete applications The papers in these proceedings provide an accurate cross section of the lectures presented at the workshop This book will be of interest to a wide group of pure and applied mathematicians
