Complex Differential and Difference Equations Galina Filipuk, Alberto Lastra, Sławomir Michalik, Yoshitsugu Takei, Henryk Żołądek, 2019-11-18 With a balanced combination of longer survey articles and shorter peer reviewed research level presentations on the topic of differential and difference equations on the complex domain this edited volume presents an up to date overview of areas such as WKB analysis summability resurgence formal solutions integrability and several algebraic aspects of differential and difference equations

Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory Gebhard Böckle, Wolfram Decker, Gunter Malle, 2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory

Galois Theory of Linear Differential Equations Marius van der Put, Michael F. Singer, 2012-12-06 Linear differential equations form the central topic of this volume Galois theory being the unifying theme A large number of aspects are presented algebraic theory especially differential Galois theory formal theory classification algorithms to decide solvability in finite terms monodromy and Hilbert's 21st problem asymptotics and summability the inverse problem and linear differential equations in positive characteristic The appendices aim to help the reader with concepts used from algebraic geometry linear algebraic groups sheaves and tannakian categories that are used This volume will become a standard reference for all mathematicians in this area of mathematics including graduate students

Motives and Algebraic Cycles Rob de Jeu, James Dominic Lewis, 2009 Spencer J Bloch has and continues to have a profound influence on the subject of Algebraic K Theory Cycles and Motives This book which is comprised of a number of independent research articles written by leading experts in the field is dedicated in his honour and gives a snapshot of the current and evolving nature of the subject Some of the articles are written in an expository style providing a perspective on the current state of the subject to those wishing to learn more about it Others are more technical representing new developments and making them especially interesting to researchers for keeping abreast of recent progress

Twisted L-Functions and Monodromy. (AM-150) Nicholas M. Katz, 2002-02-24 For hundreds of years the study of

elliptic curves has played a central role in mathematics. The past century in particular has seen huge progress in this study from Mordell's theorem in 1922 to the work of Wiles and Taylor-Wiles in 1994. Nonetheless, there remain many fundamental questions where we do not even know what sort of answers to expect. This book explores two of them: What is the average rank of elliptic curves and how does the rank vary in various kinds of families of elliptic curves. Nicholas Katz answers these questions for families of big twists of elliptic curves in the function field case with a growing constant field. The monodromy theoretic methods he develops turn out to apply still in the function field case equally well to families of big twists of objects of all sorts, not just to elliptic curves. The leisurely, lucid introduction gives the reader a clear picture of what is known and what is unknown at present and situates the problems solved in this book within the broader context of the overall study of elliptic curves. The book's technical core makes use of and explains various advanced topics ranging from recent results in finite group theory to the machinery of l -adic cohomology and monodromy. Twisted L-Functions and Monodromy is essential reading for anyone interested in number theory and algebraic geometry.

Handbook of Algebra M.

Hazewinkel, 2006-05-30. Algebra as we know it today consists of many different ideas, concepts, and results. A reasonable estimate of the number of these different items would be somewhere between 50,000 and 200,000. Many of these have been named, and many more could and perhaps should have a name or a convenient designation. Even the nonspecialist is likely to encounter most of these either somewhere in the literature, disguised as a definition or a theorem, or to hear about them and feel the need for more information. If this happens, one should be able to find enough information in this Handbook to judge if it is worthwhile to pursue the quest. In addition to the primary information given in the Handbook, there are references to relevant articles, books, or lecture notes to help the reader. An excellent index has been included, which is extensive and not limited to definitions, theorems, etc. The Handbook of Algebra will publish articles as they are received, and thus the reader will find in this third volume articles from twelve different sections. The advantages of this scheme are two-fold: accepted articles will be published quickly, and the outline of the Handbook can be allowed to evolve as the various volumes are published. A particularly important function of the Handbook is to provide professional mathematicians working in an area other than their own with sufficient information on the topic in question if and when it is needed. Thorough and practical source for information. Provides in-depth coverage of new topics in algebra. Includes references to relevant articles, books, and lecture notes.

Advances in the Theory of Numbers

Ayşe Alaca, Şaban Alaca, Kenneth S. Williams, 2015-10-28. The theory of numbers continues to occupy a central place in modern mathematics because of both its long history over many centuries as well as its many diverse applications to other fields such as discrete mathematics, cryptography, and coding theory. The proof by Andrew Wiles with Richard Taylor of Fermat's last theorem, published in 1995, illustrates the high level of difficulty of problems encountered in number theoretic research as well as the usefulness of the new ideas arising from its proof. The thirteenth conference of the Canadian Number Theory Association was held at Carleton University, Ottawa, Ontario, Canada.

from June 16 to 20 2014 Ninety nine talks were presented at the conference on the theme of advances in the theory of numbers Topics of the talks reflected the diversity of current trends and activities in modern number theory These topics included modular forms hypergeometric functions elliptic curves distribution of prime numbers diophantine equations L functions Diophantine approximation and many more This volume contains some of the papers presented at the conference All papers were refereed The high quality of the articles and their contribution to current research directions make this volume a must for any mathematics library and is particularly relevant to researchers and graduate students with an interest in number theory The editors hope that this volume will serve as both a resource and an inspiration to future generations of researchers in the theory of numbers *The Abel Prize 2008-2012* Helge Holden,Ragni Piene,2014-01-21 Covering the years 2008 2012 this book profiles the life and work of recent winners of the Abel Prize John G Thompson and Jacques Tits 2008 Mikhail Gromov 2009 John T Tate Jr 2010 John W Milnor 2011 Endre Szemer di 2012 The profiles feature autobiographical information as well as a description of each mathematician s work In addition each profile contains a complete bibliography a curriculum vitae as well as photos old and new As an added feature interviews with the Laureates are presented on an accompanying web site <http://extras.springer.com> The book also presents a history of the Abel Prize written by the historian Kim Helsing and includes a facsimile of a letter from Niels Henrik Abel which is transcribed translated into English and placed into historical perspective by Christian Skau This book follows on *The Abel Prize 2003 2007 The First Five Years* Springer 2010 which profiles the work of the first Abel Prize winners *Ergodic Theory* Cesar E.
