Riparian Landscapes:

Riparian Landscapes George Patrick Malanson, 1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography

Vegetation of Australian Riverine Landscapes Samantha Capon, Cassandra James, Michael Reid, 2016-04-01 Vegetation communities in Australia's riverine landscapes are ecologically economically and culturally significant They are also among the most threatened ecosystems on the continent and have been dramatically altered as a result of human activities and climate change Vegetation of Australian Riverine Landscapes brings together for the first time the results of the substantial amount of research that has been conducted over the last few decades into the biology ecology and management of these important plant communities in Australia The book is divided into four sections The first section provides context with respect to the spatial and temporal dimensions of riverine landscapes in Australia The second section examines key groups of riverine plants while the third section provides an overview of riverine vegetation in five major regions of Australia including patterns significant threats and management The final section explores critical issues associated with the conservation and management of riverine plants and vegetation including water management salinity fire and restoration Vegetation of Australian Riverine Landscapes highlights the incredible diversity and dynamic nature of riverine vegetation across Australia and will be an excellent reference for researchers academics and environmental consultants

Decisions at the Water's Edge Lynne M. Westphal, 2006 **Riparia** Robert J. Naiman, Henri Decamps, Michael E. McClain, 2010-08-05 This book describes the underlying water conditions and geologies that support viable riparia illustrates the ecological characteristics of riparia and discusses how riparia are used by human cultures as well as how riparia can be used to sustain environmental quality In recent years riparian management has been widely implemented as a means of improving fisheries water quality and habitat for endangered species This book provides the basic knowledge necessary to implement successful long term management and rehabilitation programs Treats riparian patterns processes in a holistic perspective from ecological components to societal activities Contains over 130 illustrations and photos that summarize this complex ecological system Synthesizes the information from more than 6 000 professional articles Sidebars provide a look into ongoing research that is

at the frontiers of riparian ecology and management Mountains and Plains Dennis H. Knight, George P. Jones, William A. Reiners, William H. Romme, 2014-01-01 Many changes some discouraging others hopeful have occurred in the Rocky Mountain region since the first edition of this widely acclaimed book was published Wildlife habitat has become more fragmented once abundant sage grouse are now scarce and forest fires occur more frequently At the same time wolves have been successfully reintroduced and new approaches to conservation have been adopted For this updated and expanded Second Edition the authors provide a highly readable synthesis of research undertaken in the past two decades and address two important questions How can ecosystems be used so that future generations benefit from them as we have How can we anticipate and adapt to climate changes while conserving biological diversity Encyclopedia of Deserts Michael A. Mares, 2017-01-19 Encyclopedia of Deserts represents a milestone it is the first comprehensive reference to the first comprehensive reference to deserts and semideserts of the world Approximately seven hundred entries treat subjects ranging from desert survival to the way deserts are formed Topics include biology birds mammals reptiles amphibians fishes invertebrates plants bacteria physiology evolution geography climatology geology hydrology anthropology and history The thirty seven contributors including volume editor Michael A Mares have had extensive careers in deserts research encompassing all of the world's arid and semiarid regions The Encyclopedia opens with a subject list by topic an organizational guide that helps the reader grasp interrelationships and complexities in desert systems Each entry concludes with cross references to other entries in the volume inviting the reader to embark on a personal expedition into fascinating previously unknown terrain In addition a list of important readings facilitates in depth study of each topic An exhaustive index permits quick access to places topics and taxonomic listings of all plants and animals discussed More than one hundred photographs drawings and maps enhance our appreciation of the remarkable life landforms history and challenges of the world's arid land **Our Living Resources**, 1995 Report provides information on distribution abundance and health of birds mammals reptiles and amphibians fishes invertebrates plants terrestrial ecosystems aquatic ecosystems coastal and marine ecosystems riparian ecosystems the Great Plains Interior West Alaska and Hawaii It also discusses special issues global climate change human influences non native species and habitat assessments General Technical Report NC., 1981 Where Land and Water Meet Nancy Langston, 2009-11-23 Water and land interrelate in surprising and ambiguous ways and riparian zones where land and water meet have effects far outside their boundaries Using the Malheur Basin in southeastern Oregon as a case study this intriguing and nuanced book explores the ways people have envisioned boundaries between water and land the ways they have altered these places and the often unintended results The Malheur Basin once home to the largest cattle empires in the world experienced unintended widespread environmental degradation in the late nineteenth and early twentieth centuries After establishment in 1908 of Malheur National Wildlife Refuge as a protected breeding ground for migratory birds and its expansion in the 1930s and 1940s the area experienced equally extreme intended modifications aimed at restoring riparian

habitat Refuge managers ditched wetlands channelized rivers applied Agent Orange and rotenone to waterways killed beaver and cut down willows Where Land and Water Meet examines the reasoning behind and effects of these interventions gleaned lessons from their successes and failures Although remote and specific the Malheur Basin has myriad ecological and political connections to much larger places This detailed look at one tangled history of riparian restoration shows how through appreciation of the complexity of environmental and social influences on land use and through effective handling of conflict people can learn to practice a style of pragmatic adaptive resource management that avoids rigid adherence to single agendas and fosters improved relationships with the land

Plant Nutrition for Sustainable Food Production and Environment Tadao Ando,Kounosuke Fujita,Tadahiko Mae,Hideaki Matsumoto,Satoshi Mori,Jiro Sekiya,2012-12-06 In the history of the International Plant Nutrition Colloquium from its first meeting in 1954 this meeting the 13th Colloquium is the first to be held in Asia and will be the last in the 20th century The 20th century has seen huge changes in the number and activities of mankind Our population has increased from around 1.7 billion to more than 5.8 billion and technological innovations have completely altered our way of living As a consequence of such rapid change we are facing many problems including changes in our environment of a global scale But while food shortage has been a serious concern to mankind throughout our history serious food shortages in the 20th century have been confined to limited times and areas As Lester Brown discusses in this volume farmers have increased food production heroically on demand We the plant nutritionists should be proud of our support to the world's farmers which has helped them make their achievement possible During the 20th century the science of plant nutrition also has achieved great progress as described by Jack Loneragan it became established as a discipline firmly based in science defined the chemical elements supporting plant growth and has contributed to improvements in plant production and environmental quality as readers will find in many contributions in this volume
