Risk and Responsibility in Context Adriana Placani, Stearns Broadhead, 2023-08-31 This volume bridges contemporary philosophical conceptions of risk and responsibility and offers an extensive examination of the topic. It shows that risk and responsibility combine in ways that give rise to new philosophical questions and problems. Philosophical interest in the relationship between risk and responsibility continues to rise due in no small part to environmental crises, emerging technologies, legal developments, and new medical advances. Despite such interest, scholars are still working out how to conceive of the links between risk and responsibility, the implications that risks may have to conceptions of responsibility, and vice versa, as well as how such theorizing might play out in applied cases. With contributions from leading scholars, this volume brings together new work examining the interplay between risk and responsibility, exploring its varied philosophical aspects and applications to contemporary issues in law, bioethics, technology, and environmental ethics. Risk and Responsibility in Context will be of interest to philosophers working in ethics, bioethics, philosophy of law, and philosophy of technology, as well as scholars and practitioners in law, health, and science management, public policy, and environmental studies. Flood Risk and Social Justice Zoran Vojinovic, Michael B. Abbott, 2012-03-05 Flood Risk and Social Justice is a response to the rising significance of floods and flood related disasters worldwide as an initiative to promote a socially just approach to the problems of flood risk It integrates the human social and the technological components to provide a holistic view This book treats flooding as a multi dimensional human and natural world tragedy that must be accommodated using all the social and technological means that can be mobilised before during and after the flooding event It covers socially just flood risk mitigation practices which necessitate a wide range of multidisciplinary approaches starting from social and wider environmental needs including feedback cycles between human needs and technological means Flood Risk and Social Justice looks at how to judge whether a risk is acceptable or not by addressing an understanding of social and phenomenological considerations rather than simple calculations of probabilities multiplied by unwanted outcomes and their balancing between costs and benefits It is argued that the present flood management practice should be largely replaced by the social justice approach where particular attention is given to deciding what is the right thing to do within a much wider context Thus it insists upon the validity of modes of human understanding which cannot be addressed within the limited context of modern science Flood Risk and Social Justice is written to support a wide range of audiences and seeks to improve the dialogue between researchers and practitioners from different disciplines including post graduate engineering environmental and social science students industry practitioners academics planners environmental advocacy groups and environmental law professionals who have a strong interest in a new kind of social justice work that can act as a continuous counter balance to the various mechanisms that unceasingly give rise to profound injustices More information about this book can be found in this article written for the WaterWiki by the author <http://www.iwaterwiki.org/xwiki/bin/view/Articles/FloodRiskandSocialJustice> Authors Zoran Vojinovic is Associate Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands with almost 20 years of consulting and research experience in various aspects of water industry in New Zealand Australia Asia Europe Central South America and the Caribbean Michael B Abbott is Emeritus Professor at the UNESCO IHE Institute for Water Education Delft the Netherlands and a Director of the European Institute for Industrial Leadership in Brussels He founded and developed the disciplines of Computational Hydraulics and Hydroinformatics and co founded the Journal of Hydroinformatics with Professor Roger Falconer

Reasonableness and Risk Gregory C. Keating, 2022 The law of torts is concerned with what we owe to one another in the way of obligations not to interfere with or impair each other's urgent

interests as we go about our lives in civil society This book argues that tort law addresses a domain of basic justice and that its rhetoric of reasonableness implies a distinctive morality of mutual right and responsibility WFMO Ihor Ivliev, 2025-07-20

The Central Argument This work proceeds from a hard assumption that most strategies proposed for systemic safety are not just incomplete but structurally incoherent under pressure It argues that the game of software level control is not merely difficult but already forfeited This is not declared it is derived via a three front autopsy

A Institutional The will to constrain has collapsed under the weight of myopic incentives

B Technical Our tools are already being overrun by the systems they aim to contain

C Formal The math never promised perfect control in the first place What remains is a single viable lever the application of direct material friction to the system s physical inputs compute capital and energy before those inputs optimize you out of the loop

A Warning on Method Do not grant trust to this document by default Treat it as a hostile input stream until it earns your attention

Large Language Models were actively used in deep internet research and the construction of this document not as trusted collaborators but as adversarial instruments under constant suspicion For the author a non expert and non native English speaker this was a lesser evil Their known failure modes hallucination mimicry sycophancy and others were not treated as rare bugs but as predictable pressures to resist These pathologies made passive reliance a tactical impossibility That pressure shaped the output not despite their flaws but through direct confrontation with them This is a personal analytical exercise not authoritative guidance The author claims no institutional or professional authority and all conclusions should be independently verified No claim here is final Each is a starting point for your own critical verification
