Rites Of Rock:

Beliefs and Rituals in Archaic Eastern North America Cheryl Claassen, 2015-06-15 Claassen's work focuses on the American Archaic period marked by the end of the Ice Age approximately 11 000 years ago and a geographic area bounded by the edge of the Great Plains Newfoundland and southern Florida This period and region share specific beliefs and practices such as human sacrifice dirt mound burial and oyster shell middens This interpretive guide serves as a platform for new interpretations and theories on this period For example Claassen connects rituals to topographic features and posits the Pleistocene Holocene transition as a major stimulus to Archaic beliefs She also expands the interpretation of existing data previously understood in economic or environmental terms to include how this same data may also reveal spiritual and symbolic practices Similarly Claassen interprets Archaic culture in terms of human agency and social constraint bringing ritual acts into focus as drivers of social transformation and ethnogenesis *Ambiguous Images* Kelley Hays-Gilpin, 2004 What does rock art say about gender and how can our understanding of gender shape the way that we view rock art A significant contribution to the relatively unexplored field of gender in rock art this volume contains a wealth of information for archaeologists anthropologists and art historians interested in past gender systems Hays Gilpin argues that art is at once a product of its physical and social environment and at the same time a tool of influence in shaping behavior and ideas within a society Taking this stance rock art is shown to be very often one of the strongest lines of evidence available to scholars in understanding ritual practices gender roles and ideological constructs of prehistoric peoples Subsequently issues of representation and the people who made these forms of art are also discussed *Sex and Drugs Before Rock 'n' Roll* Benjamin Roberts, 2012 *Sex and Drugs Before the Rock n Roll* is a fascinating volume that presents an engaging overview of what it was like to be young and male in the Dutch Golden Age Here well known cohorts of Rembrandt are examined for the ways in which they expressed themselves by defying conservative values and norms This study reveals how these young men rebelled breaking from previous generations letting their hair grow long wearing colorful clothing drinking excessively challenging city guards being promiscuous smoking and singing lewd songs Cogently argued this study paints a compelling portrait of the youth culture of the Dutch Golden Age at a time when the rising popularity of print made dissemination of new cultural ideas possible while rising incomes and liberal attitudes created a generation of men behaving badly *Elevated Rock Art* Johan Ling, 2014-11-30 How may Bohuslän rock art and landscape be perceived and understood Since the Bronze Age the landscape has been transformed by shore displacement but largely due to misunderstanding and certain ideas about the character of Bronze Age society rock art research in Tanum has drawn much of its inspiration from the present agrarian landscape This perception of the landscape has not been a major issue This volume republished from the GOTAC Serie B Gothenburg Archaeological thesis 49 aims to shed light on the process of shore displacement and its social and cognitive implications for the interpretation of rock art in the prehistoric landscape The findings clearly show that in the Bronze Age

the majority of rock art sites in Bohuslän had a very close spatial connection to the sea. Much rock art analysis focuses on the contemplative observer. The more direct activities related to rock art are seldom fully considered. Here the basic conditions for the production of rock art, social theory and approaches to image communication, symbolism and social action are discussed and related to palpable social forms of the reading of rock art. The general location and content of the Bronze Age remains indicate a tendency towards the maritime realm which seems to have included both socio-ritual and socio-economic matters of production and consumption and that Bronze Age groups in Bohuslän were highly active and mobile. The numerous configurations of ship images on the rocks could indicate a general transition or drift towards the maritime realm. Marking or manifesting such transitions in some way may have been important and it is tempting to perceive the rock art as traces of such transitions or positions in the landscape. All this points to a maritime understanding of Bronze Age rock art in northern Bohuslän.

The Rock-Art of Eastern North America Carol Diaz-Granados, James R. Duncan, 2004-11-28. Showcases the wealth of new research on sacred imagery found in twelve states and four Canadian provinces. In archaeology, rock art, any long-lasting marking made on a natural surface is similar to material culture, pottery and tools because it provides a record of human activity and ideology at that site. Petroglyphs, pictographs and dendroglyphs (tree carvings) have been discovered and recorded throughout the eastern woodlands of North America on boulders, bluffs and trees in caves and in rock shelters. These cultural remnants scattered on the landscape can tell us much about the belief systems of the inhabitants that left them behind. The Rock Art of Eastern North America brings together 20 papers from recent research at sites in eastern North America where humidity and the actions of weather including acid rain can be very damaging over time. Contributors to this volume range from professional archaeologists and art historians to avocational archaeologists including a surgeon, a lawyer, two photographers and an aerospace engineer. They present information, drawings and photographs of sites ranging from the Seven Sacred Stones in Iowa to the Bald Friar Petroglyphs of Maryland and from the Lincoln Rise Site in Tennessee to the Nisula Site in Quebec. Discussions of the significance of artist gender, the relationship of rock art to mortuary caves and the suggestive link to the peopling of the continent are particularly notable contributions. Discussions include the history, ethnography, recording methods, dating and analysis of the subject sites and integrate these with the known archaeological data.

The Archaeology of Rock-Art Christopher Chippindale, Paul S. C. Taçon, 1998. Pictures painted and carved in caves and on open rock surfaces are amongst our loveliest relics from prehistory. This pioneering set of sparkling essays goes beyond guesses as to what the pictures mean, instead exploring how we can reliably learn from rock art as a material record of distant times in short rock art as archaeology. Sometimes contact period records offer some direct insight about indigenous meaning so we can learn in that informed way. More often we have no direct record and instead have to use formal methods to learn from the evidence of the pictures themselves. The book's eighteen papers range wide in space and time from the Palaeolithic of Europe to nineteenth century Australia. Using varied approaches within the consistent framework of informed

and proven methods they make key advances in using the striking and reticent evidence of rock art to archaeological benefit
