**Machine Tool Technology** Willard J. McCarthy, 1968      Machine Tool Technology Basics Stephen F. Krar, 2003  
Includes a valuable CAD CAM software program      Microfabrication and Nanomanufacturing Mark J. Jackson, 2005-11-10  
Nanotechnology seen as the next leap forward in the industrial revolution requires that manufacturers develop processes that revolutionize the way small products are made Microfabrication and Nanomanufacturing focuses on the technology of fabrication and manufacturing of engineering materials at these levels The book provides an overview of techniques used in the semiconductor industry It also discusses scaling and manufacturing processes operating at the nanoscale for non semiconductor applications the construction of nanoscale components using established lithographic techniques bulk and surface micromachining techniques used for etching machining and molding procedures and manufacturing techniques such as injection molding and hot embossing This authoritative compilation describes non traditional micro and nanoscale processing that uses a newly developed technique called pulsed water jet machining as well as the efficient removal of materials using optical energy Additional chapters focus on the development of nanoscale processes for producing products other than semiconductors the use of abrasive particles embedded in porous tools and the deposition and application of nanocrystalline diamond Economic factors are also presented and concern the promotion and commercialization of micro and nanoscale products and how demand will eventually drive the market      Cutting Tool Technology Graham T. Smith, 2008-07-03 It is a well acknowledged fact that virtually all of our modern day components and assemblies rely to some extent on machining operations in their manufacturing process Thus there is clearly a substantive machining requirement which will continue to be of prime importance for the foreseeable future Cutting Tool Technology provides a comprehensive guide to the latest developments in the use of cutting tool technology The book covers new machining and tooling topics such as high speed and hard part machining near dry and dry machining strategies multi functional tooling diamond like and atomically modified coatings plus many others Also covered are subjects important from a research perspective such as micro machining and artificial intelligence coupled to neural network tool condition monitoring A practical handbook complete with troubleshooting tables for common problems Cutting Tool Technology is an invaluable reference for researchers manufacturers and users of cutting tools      *Handbook of High-Speed Machining Technology* Robert King, 2013-03-08 The United States now spends approximately 115 billion annually to perform its metal removal tasks using conventional machining technology Of this total amount about 14 billion is invested in the aerospace and associated industries It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system To aid in this endeavor work has begun to establish a new scientific and technical base that will provide principles upon which manufacturing decisions may be based One of the metal removal areas that has the potential for great economic advantages is high speed machining and related technology

This text is concerned with discussions of ways in which high speed machining systems can solve immediate problems of profiling pocketing slotting sculpturing facing turning drilling and thin walled sectioning Benefits to many existing programs are provided by aiding in solving a current management production problem that of efficiently removing large volumes of metal by chip removal The injection of new high rate metal removal techniques into conventional production procedures which have remained basically unchanged for a century presents a formidable systems problem both technically and managerially The proper solution requires a sophisticated difficult process whereby management worker relationships are reassessed age old machine designs reevaluated and a new vista of product process planning and design admitted
