**Quality Assessment** Joss Moorkens, Sheila Castilho, Federico Gaspari, Stephen Doherty, 2018-07-13 This is the first volume that brings together research and practice from academic and industry settings and a combination of human and machine translation evaluation. Its comprehensive collection of papers by leading experts in human and machine translation quality and evaluation who situate current developments and chart future trends fills a clear gap in the literature. This is critical to the successful integration of translation technologies in the industry today where the lines between human and machine are becoming increasingly blurred by technology. This affects the whole translation landscape from students and trainers to project managers and professionals including in-house and freelance translators as well as of course translation scholars and researchers. The editors have broad experience in translation quality evaluation research including investigations into professional practice with qualitative and quantitative studies and the contributors are leading experts in their respective fields providing a unique set of complementary perspectives on human and machine translation quality and evaluation combining theoretical and applied approaches.

*Corpus Linguistics. Volume 2* Anke Lüdeling, Merja Kytö, 2009-03-26 This handbook provides an up-to-date survey of the field of corpus linguistics, a field whose methodology has revolutionized much of the empirical work done in most fields of linguistic study over the past decade. Corpus linguistics investigates human language by starting out from large collections of texts spoken, written or recorded. These language corpora which are now regularly available in electronic form are the basis for quantitative and qualitative research on almost any question of linguistic interest. Many techniques that are in use in corpus linguistics today are rooted in the tradition of the late 18th and 19th century when linguistics began to make use of mathematical and empirical methods. Modern corpus linguistics has used and developed these methods in close connection with computer science and computational linguistics. The handbook sketches the history of corpus linguistics, shows its potential, discusses its problems and describes various methods of collecting, annotating and searching corpora as well as processing corpus data. It also reports case studies that illustrate the wide range of linguistic research questions addressed in corpus linguistics. The over 60 articles included in the handbook are divided into five sections: 1. the origins and history of corpus linguistics and surveys of its relationship to central fields of linguistics; 2. corpus compilation; 3. corpus types; 4. preprocessing of corpora; 5. the use and exploitation of corpora. The final section gives an overview of the results of corpus studies obtained in phonetics, phonology, morphology, syntax, semantics, sociolinguistics, historical linguistics, stylometry, dialectology and discourse analysis. It also reports on recent advances made in human and machine translation, contrastive studies, computer-assisted language learning and automatic summarization. The contributors to the volume are internationally known experts in their respective fields. The handbook is intended for a wide audience ranging from teachers, university students and scholars to anyone interested in the use of computers in linguistic analyses and applications.
