Dust Geoffrey Tweedale, 2003 **Liability of Corporate Groups and Networks** Christian A. Witting, 2018-01-11 What happens when a corporate subsidiary or network company is unable to pay personal injury victims in full This book sets out to tackle the insolvent entity problem especially as it arises in cases of mass wrongdoing such as those involving asbestos exposure and defective pharmaceuticals After discussing the nature of corporate groups and networks from the perspectives of business history organisation studies and social theory the book assesses a range of rules and proposed rules for extending liability for personal injuries beyond insolvent entities New proposals are put forward for an exception to the rule of limited liability and for the development of a flexible new tort based on conspiracy that encompasses not only control based relationships but also horizontal coordination between companies The book concludes with a general discussion of lessons learned from debates about extended liability and provides guidelines for the development of new liability rules

Engineering and Society: Working Towards Social Justice, Part I Caroline Baillie, George Catalano, 2022-05-31 Engineers work in an increasingly complex entanglement of ideas people cultures technology systems and environments Today decisions made by engineers often have serious implications for not only their clients but for society as a whole and the natural world Such decisions may potentially influence cultures ways of living as well as alter ecosystems which are in delicate balance In order to make appropriate decisions and to co create ideas and innovations within and among the complex networks of communities which currently exist and are shaped by our decisions we need to regain our place as professionals to realise the significance of our work and to take responsibility in a much deeper sense Engineers must develop the ability to respond to emerging needs of all people across all cultures To do this requires insights and knowledge which are at present largely within the domain of the social and political sciences but which need to be shared with our students in ways which are meaningful and relevant to engineering This book attempts to do just that In Part 1 Baillie introduces ideas associated with the ways in which engineers relate to the communities in which they work Drawing on

scholarship from science and technology studies globalisation and development studies as well as work in science communication and dialogue this introductory text sets the scene for an engineering community which engages with the public In Part 2 Catalano frames the thinking processes necessary to create ethical and just decisions in engineering to understand the implications of our current decision making processes and think about ways in which we might adapt these to become more socially just in the future In Part 3 Baillie and Catalano have provided case studies of everyday issues such as water garbage and alarm clocks to help us consider how we might see through the lenses of our new knowledge from Parts 1 and 2 and apply this to our every day existence as engineers Table of Contents Introduction Engineering and Society Engineering and the Public Globalisation Development and Technology

Perspectives on Causation Richard Goldberg, 2011-10-21 The chapters in this volume arise from a conference held at the University of Aberdeen concerning the law of causation in the UK Commonwealth countries France and the USA The distinguished group of international experts who have contributed to this book examine the ways in which legal doctrine in causation is developing and how British law should seek to influence and be influenced by developments in other countries As such the book will serve as a focal point for the study of this important area of law The book is organised around three themes the black letter law scientific evidence and legal theory In black letter law scholarship major arguments have emerged about how legal doctrine will develop in cases involving indeterminate defendants and evidential gaps in causation Various chapters examine the ways in which legal doctrine should develop over the next few years in particular in England Scotland Canada and the USA including the problem of causation in asbestos cases In the area of scientific evidence its role in the assessment of causation in civil litigation has never been greater The extent to which such evidence can be admitted and used in causation disputes is controversial This section of the book is therefore devoted to exploring the role of statistical evidence in resolving causation problems including recent trends in litigation in the UK USA Australia and in France and the question of liability for future harm In the legal theory area the so called NESS necessary element in a sufficient set test of causation is discussed and defended The importance of tort law responding to developing science and observations from the perspective of precaution and indeterminate causation are also explored The book will be of interest to legal academics policy makers in the field specialist legal practitioners those in the pharmaceutical and bioscience sectors physicians and scientists

UK T&T Clark Companion to Nonconformity Robert Pope, 2013-11-21 Protestant Nonconformity the umbrella term for Congregationalists Presbyterians Baptists Methodists and Unitarians belongs specifically to the religious history of England and Wales Initially the result of both unwillingness to submit to the State's interference in Christian life and a dissatisfaction with the progress of reform in the English Church Nonconformity has been primarily motivated by theological concern ecclesial polity devotion and the nurture of godliness among the members of the church Alongside such churchly interests Nonconformity has also made a profound contribution to debates about the role of the State to family life and education culture in general trade and industry the development of philanthropy and charity and the development of pacifism In this volume for the first time Nonconformity and the breadth of its activity come under the expert scrutiny of a host of recognised scholars The result is a detailed and fascinating account of a movement in church history that while currently in decline has made an indelible mark on social political economic and religious life of the two nations *When the Air Became Important* Janet Greenlees, 2019-03-15 Janet Greenlees examines the working environments of the heartlands of the British and American cotton textile industries from the nineteenth to the late twentieth centuries She contends that the air quality within these pioneering workplaces was a key contributor to the health of the wider communities of which they were a part

Defending the Indefensible Jock McCulloch, Geoffrey Tweedale, 2008-07-24 In the early twentieth century asbestos had a reputation as a lifesaver In 1960 however it became known that even relatively brief exposure to asbestos can cause mesothelioma a virulent and lethal cancer Yet the bulk of the world s asbestos was mined after 1960 Asbestos usage in many countries continued unabated This is the first global history of how the asbestos industry and its allies in government insurance and medicine defended the product throughout the twentieth century It explains how mining and manufacture could continue despite overwhelming medical evidence as to the risks The argument advanced in this book is that asbestos has proved so enduring because the industry was able to mount a successful defense strategy for the mineral a strategy that still operates in some parts of the world This defence involved the shaping of the public debate by censoring and sometimes corrupting scientific research nurturing scientific uncertainty and using allies in government insurance and medicine The book also discusses the problems of asbestos in the environment compensating victims and the continued use of asbestos in the developing world Its global focus shows how asbestos can be seen as a model for many occupational diseases indeed for a whole range of hazards produced by industrial societies The book is based on a wealth of documentary material gained from legal discovery supplemented by evidence from the authors visits and researches in the US the UK Canada Kazakhstan Zimbabwe Australia Swaziland and South Africa
