

New theory on the magnetic fields.

This new theory is based on a hypothetical matter that fills the universe (-OH), which would be in crystalline state neutral in space, but when they come into contact with the centrifugal force of the celestial bodies changes to a field electrically charged.

The intensity of these magnetic fields according to this theory is due to three main causes;

1. The amount of matter that finds the body celestial in outer space, in its translational motion, will influence its magnetic intensity.
2. The speed of rotation of the celestial bodies will influence its magnetic intensity.
3. Finally the size of celestial bodies, will also influence its magnetic intensity.
