

Milestones in Microbiology Over the Last 7 Decades

Ask most people what they consider to be important milestones in the history of microbiology and you are likely to hear, Louis Pasteur and pasteurisation to make our food and drink safe, Alexander Fleming and the discovery of penicillin to treat bacterial infection or John Snow revealing how cholera spread. All of these are important advances in our understanding of an invisible "other world", and many have direct effects upon our lives. Astounding leaps in knowledge and understanding continue to be made, some of which impact us directly whilst others happen quietly in the background and few outside the field appreciate their gravity and significance.

In this list we will highlight some of the less well known but nonetheless ground breaking and important milestones in microbiology from the past seven decades.

1950's – Transduction is described for the first time

In 1952 Joshua Lederberg and Norton Zinder demonstrated that viruses are able to transfer genetic material from one bacterial strain to another via a process now known as transduction¹. These viruses, known as phage, are able to enter a bacterial cell, integrate themselves into the host cell's genome and effectively hijack the host's genetic machinery
