Military World:

A Handbook of Military Conscription and Composition the World Over Rita J. Simon, Mohamed Alaa Abdel-Moneim, 2011-10-16 This book focuses on military conscription in 22 countries that represent the world's regions. The purpose is to shed light on the history, politics, and main events that led to the choice of conscription or professional military forces in the countries under study. While we acknowledge that practical and technological developments played major roles in this choice, we also understand that racial and gender relations, social group, and political regime dynamics, regional influences, and international forces also affected military composition and relations to the rest of the society. Through this review, we aim at providing an easy-to-access source of knowledge about military mobilization policies and historical developments, as well as the main ideas, politics, and events that shaped them. Through this review, we offer a glimpse on developments that influenced societies and political systems and were reflected in their militaries.

Patents for Power Robert M. Farley, Davida H. Isaacs, 2020-10-30 In an era when knowledge can travel with astonishing speed, the need for analysis of intellectual property (IP) law and its focus on patents, trade secrets, trademarks, and issues of copyright has never been greater. But as Robert M. Farley and Davida H. Isaacs stress in *Patents for Power*, we have long overlooked critical ties between IP law and one area of worldwide concern: military technology. This deft blend of case studies, theoretical analyses, and policy advice reveals the fundamental role of IP law in shaping how states create and transmit defense equipment and weaponry. The book probes two major issues: the effect of IP law on innovation itself and the effect of IP law on the international diffusion or sharing of technology. Discussing a range of inventions from the AK 47 rifle to the B 29 Superfortress bomber to the MQ 1 Predator drone, the authors show how IP systems or their lack have impacted domestic and international relations across a number of countries, including the United States, Russia, China, and South Korea. The study finds, among other results, that while the open nature of the IP system may encourage industrial espionage like cyberwarfare, increased state uptake of IP law is helping to establish international standards for IP protection.
