

Cardiac Muscle and Heart Function

- Cardiac muscle fibers are striated – sarcomere is the functional unit
- Fibers are branched; connect to one another at *intercalated discs*. The discs contain several gap junctions
- Nuclei are centrally located
- Abundant mitochondria
- SR is less abundant than in skeletal muscle, but greater in density than smooth muscle
- Sarcolemma has specialized ion channels that skeletal muscle does not – voltage-gated Ca^{2+} channels
- Fibers are not anchored at ends; allows for greater sarcomere shortening and lengthening
