Optimal Pricing Inflation And The Cost Of Price Adjustment:

Optimal Pricing, Inflation, and the Cost of Price Adjustment Eytan Sheshinski, Yoram Weiss, 1993 These collected articles constitute what is perhaps the definitive study of pricing models under inflation providing a solid basis for further research on this elusive question What are the real effects of inflation These collected articles constitute what is perhaps the definitive study of pricing models under inflation providing a solid basis for further research on this elusive question Covering a broad range of theory and applications by well known microeconomists the eighteen contributions evaluate the effects of inflation on aggregate output and on welfare and reveal the scope of recent efforts to explicitly incorporate frictions in economic models A basic building block common to most of the essays in this volume is the observation that individual firms change nominal prices intermittently The frequency and size of nominal price changes are influenced by the cost of price adjustment and changes in the economic environment production costs market demand market structure and most important inflation Thus the degree of nominal rigidity is influenced by the economic environment and in a dynamic context Two introductory essays survey the empirical studies of pricing policies by individual firms and the theoretical efforts to integrate the nominal rigidities at the micro level into macro relationships The essays that follow treat the general problem of optimal dynamic adjustment in the presence of convex costs of adjustment include applications of the inventory models to the case of nominal price adjustment by an individual firm address the question of aggregation introduce active search by consumers and provide empirical analysis of nominal price rigidities

Optimal Price Adjustment with Time-dependent Costs Joshua Aizenman, 1984 The purpose of this paper is to analyze an optimal pricing rule for the case in which the costs of price adjustment are time dependent and where those costs depend positively on the magnitude of the percentage price change By means of discrete time model it is shown that the optimal response to the problem under consideration is to pre set prices for each period at the end of the previous period Within the period prices will adjust if the unexpected shock exceeds a threshold level In such a case the new price is established at a level that is a weighted average of the pre set level and of the equilibrium level that would have obtained in the absence of costs of contemporaneous price adjustment Under certain conditions which are derived in the paper higher volatility of unexpected inflation might reduce relative price volatility

Imperfect Competition and Sticky Prices N. Gregory Mankiw, David Romer, 1991 These two volumes bring together a set of important essays that represent a new Keynesian perspective in economics today This recent work shows how the Keynesian approach to economic fluctuations can be supported by rigorous microeconomic models of economic behavior The essays are grouped in seven parts that cover costly price adjustment staggering of wages and prices imperfect competition coordination failures and the markets for labor credit and goods An overall introduction brief introductions to each of the parts and a bibliography of additional papers in the field round out this valuable collection Volume 1 focuses on how friction in price setting at the microeconomic level leads to nominal rigidity at the macroeconomic level and on the macroeconomic consequences of imperfect competition including aggregate demand externalities and multipliers Volume 2 addresses recent research on non Walrasian features of the labor credit and goods markets Contributors George A Akerlof Costas Azariadis Laurence Ball Ben S Bernanke Mark Bits Olivier J Blanchard Alan S Blinder John Bryant Andrew S Caplin Dennis W Carlton Stephen G Cecchetti Russell Cooper Peter A Diamond Gary Fethke Stanley Fischer Robert E Hall Oliver Hart Andrew John Nobuhiro Kiyotaki Alan B Krueger David M Lilien Ian M McDonald N David Mankiw Arthur M Okun Andres Policano David Romer Julio J Rotemberg Garth Saloner Carl Shapiro Andrei Shleifer Robert M Solow Daniel F Spulber Joseph E Stiglitz Lawrence H Summers John Taylor Andrew Weiss Michael Woodford Janet L Yellen

The Social Costs to the U.S. of Monopolization of the World Oil Market, 1972-1991 David Lloyd Greene, 1993 The partial monopolization of the world oil market by the OPEC cartel has produced significant economic costs to the economies of the world This paper reports estimates of the costs of monopolization of oil to the U S over the period 1972 1991 Two fundamental assumptions of the

analysis are 1 that OPEC has acted as a monopoly albeit with limited control knowledge and ability to act and 2 that the U S and other consuming nations could through collective social action affect the cartel s ability to act as a monopoly We measure total costs by comparing actual costs for the 1972 1991 period to a hypothetical more competitive world oil market scenario By measuring past costs we avoid the enormous uncertainties about the future course of the world oil market and leave to the reader s judgment the issue of how much the future will be like the past We note that total cost numbers cannot be used to determine the value of reducing U S oil use by one barrel They are useful for describing the overall size of the petroleum problem and are one important factor in deciding how much effort should be devoted to solving it Monopoly pricing of oil transfers wealth from US oil consumers to foreign oil producers and by increasing the economic scarcity of oil reduces the economy s potential to produce The actions of the OPEC Cartel have also produced oil price shocks both upward and downward that generate additional costs because of the economy s inherent inability to adjust quickly to a large change in energy prices Estimated total costs to the United States from these three sources for the 1972 1991 period are put at 4 1 trillion in 1990 1 2 T wealth transfer 0 8 T macroeconomic adjustment costs 2 1 T potential GNP losses The cost of the US s primary oil supply contingency program is small 10 B by comparison
