Ordinary And Delay Differential Equations Heidelberg Science Library:

Dynamical Systems, Bifurcation Analysis and Applications Mohd Hafiz Mohd, Norazrizal Aswad Abdul Rahman, Nur Nadiah Abd Hamid, Yazariah Mohd Yatim, 2019-10-11 This book is the result of Southeast Asian Mathematical Society SEAMS School 2018 on Dynamical Systems and Bifurcation Analysis DySBA It addresses the latest developments in the field of dynamical systems and highlights the importance of numerical continuation studies in tracking both stable and unstable steady states and bifurcation points to gain better understanding of the dynamics of the systems The SEAMS School 2018 on DySBA was held in Penang from 6th to 13th August at the School of Mathematical Sciences Universiti Sains Malaysia The SEAMS Schools are part of series of intensive study programs that aim to provide opportunities for an advanced learning experience in mathematics via planned lectures contributed talks and hands on workshop This book will appeal to those postgraduates lecturers and researchers working in the field of dynamical systems and their applications Senior undergraduates in Mathematics will also find it useful **Computer Aided Verification** Hana Chockler, Georg Weissenbacher, 2018-07-20 This open access two volume set LNCS 10980 and 10981 constitutes the refereed proceedings of the 30th International Conference on Computer Aided Verification CAV 2018 held in Oxford UK in July 2018 The 52 full and 13 tool papers presented together with 3 invited papers and 2 tutorials were carefully reviewed and selected from 215 submissions The papers cover a wide range of topics and techniques from algorithmic and logical foundations of verification to practical applications in distributed networked cyber physical and autonomous systems They are organized in topical sections on model checking program analysis using polyhedra synthesis learning runtime verification hybrid and timed systems tools probabilistic systems static analysis theory and security SAT SMT and decisions procedures concurrency and CPS hardware industrial applications **Inverse Acoustic and Electromagnetic Scattering Theory** David Colton, Rainer Kress, 2013-04-17 It has now been almost ten years since our first book on scattering theory appeared 32 At that time we claimed that in recent years the development of integral equation methods for the direct scattering problem seems to be nearing completion whereas the use of such an approach to study the inverse scattering problem has progressed to an extent that a state of the art survey appears highly desirable Since we wrote these words the inverse scattering problem for acoustic and electromagnetic waves has grown from being a few theoretical considerations with limited numerical implementations to a well developed mathematical theory with tested numerical algorithms This maturing of the field of inverse scattering theory has been based on the realization that such problems are in general not only nonlinear but also improperly posed in the sense that the solution does not depend continuously on the measured data This was emphasized in 32 and treated with the ideas and tools available at that time Now almost ten years later these initial ideas have developed to the extent that a monograph summarizing the mathematical basis of the field seems appropriate This book is our attempt to write such a monograph The inverse scattering problem for acoustic and electromagnetic waves can broadly be divided into

two classes the inverse obstacle problem and the inverse medium problem *Library of Congress Catalogs* Library of Congress,1979 *Scientific and Technical Books and Serials in Print* ,1984 **Subject Catalog** Library of Congress,1976

International Books in Print ,1991 **Advances in Fuzzy Integral and Differential Equations** Tofigh Allahviranloo, Soheil Salahshour, 2021-07-25 As the title of the book suggests the topics of this book are organized into two parts The first part points out the fuzzy differential equations and the second one is related to the fuzzy integral equations The book contains nine chapters that six chapters are about fuzzy differential equations and three of them are about fuzzy integral equations In each part the chapters authors are going to discuss the topics theoretically and numerically All researchers and students in the field of mathematical computer and also engineering sciences can benefit from the subjects of the book **Computational Science and Its Applications - ICCSA 2003** Vipin Kumar, 2003-05-08 The three volume set LNCS 2667 LNCS 2668 and LNCS 2669 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications ICCSA 2003 held in Montreal Canada in May 2003 The three volumes present more than 300 papers and span the whole range of computational science from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques The proceedings give a unique account of recent results in computational science **Theoretical Aspects of Computing - ICTAC 2015** Martin Leucker, Camilo Rueda, Frank D. Valencia, 2015-10-08 This book constitutes the refereed proceedings of the 12th International Colloquium on Theoretical Aspects of Computing ICTAC 2015 held in Cali Colombia in October 2015 The 25 revised full papers presented together with 7 invited talks 3 tool papers and 2 short papers were carefully reviewed and selected from 93 submissions The papers cover various topics such as algebra and category theory automata and formal languages concurrency constraints logic and semantic software architecture and component based design and verification
