Understanding Lung Cancer Naheed Ali, 2014-01-30

Cancer of any kind is scary but lung cancer is unique in that most people think that only people who smoke can or do get it The truth is that anyone can get lung cancer and it can be deadly In 2008 the most recent year numbers are available 208 493 people in the United States were diagnosed with lung cancer while 158 592 people in the United States died from lung cancer Here Dr Naheed Ali dispels the notion that only smokers develop lung cancer but also goes over their increased risk

for getting the disease while also considering the risk factors that non smokers face He provides background and tips for combating lung cancer from prevention to treatment to coping with the disease should a person fall victim In typical fashion Ali helps readers to understand what lung cancer is how it develops its different forms and how both patients and caregivers can approach healing and treatment Offering a clear background on the disease and its development this work will help lung cancer sufferers and their friends and family better cope with and understand the diagnosis Lung Cancer Walter Scott,2012 Written for patient and caregiver this thorough and easy to read guide covers the basics of lung cancer and its management Scott a cardiothoracic surgeon specializing in lung cancer treatment presents clinical information in a lucid and compassionate manner This well organized book capably guides the reader through a logical series of discussions ranging from how the lungs work to end of life care Treatments by disease type and stage and the staging process itself are smoothly explained Another strong point is the appendix which contains a concise list of chemotherapy agents and provides essential drug information including brand and generic names Although the text lacks a formal glossary definitions of technical terms are skillfully woven into the context Few consumer health titles are exclusively devoted to lung cancer and this one should prove a valuable addition to consumer health and public library collections **Lung Cancer: Basic and Clinical Aspects** Heine Høi Hansen,1986-04-30 Lung cancer is one of the biggest challenges in oncology today The challenge is due to the recognition of the possibility of prevention in at least 70 80 % of all the cases and the extreme difficulties encountered in the treatment of this neoplasm Despite the knowledge of prevention measures such as cessation of cigarette smoking the incidence continues to increase in many countries The increase is particularly notable in females in the westernized countries where the death rate in females in certain regions surpasses that of breast cancer Furthermore in many developing countries lung cancer is now being diagnosed with increasing frequency in both sexes and it is expected to be a major cause of death in those countries later in this century or the beginning of next century if the tobacco consumption will continue its rapid rise With respect to therapy the 1970 es brought considerable progress in understanding of the clinical behaviour of lung cancer thereby establishing the importance of distinguishing between the major histologic types Therapeutic advancement was particularly experienced in small cell carcinoma with the introduction of combination chemotherapy after this special disease entity among lung cancers was recognized as being a disseminated disease in almost all cases at the time of diagnosis It was expected that the improvement in therapy would have continued in the early 1980 es not only for small cell lung cancer but also for the other cell types **Living with Lung Cancer** Barbara G.
