# Functions of Lungs

It takes O2 from the surrounding and transfers it to the bloodstream.

It also removes Co2 from the body.

Through lungs the individual takes more than 6 million breaths per year.

 Mucus is located at the lining of the lungs, which acts as a barrier to prevent foreign particles from entering the alveoli.

developments involving pulmonary disorders Pulmonary health attracts public concern as lungs are the first line of defense of the organism against various contagions and are directly influenced by all too often unhealthy constituents of ambient air which make them vulnerable to diseases The articles deal with the pathogenic background and most relevant practical aspects of the widespread pulmonary disorders Topics include the mechanisms and treatment options of sleep apnea syndrome occupational exposure to carbon dioxide and the research on prognostic factors in lung cancer Another theme tackles quality of life in chronic pathologies and the psychosocial factors often underestimated having influence on lung function already in adolescence and thus liable to shape adult pulmonary morbidity Reports on the course of recent influenza outbreaks and a rather dismal state of anti influenza measures top off the content The volume is addressed to clinicians and researchers pulmonary doctors and other professionals engaged in patient care and therapy Respiratory Epidemiology Isabella Annesi-Maesano, Bo Lundbäck, Giovanni Viegi, 2014-09-01 Over the last decade the volume of research into the pathophysiology and genetics of pulmonary diseases has increased greatly This has led to the development of new treatments and therapies for many diseases including lung cancer asthma and cystic fibrosis This issue of the ERS Monograph comprehensively demonstrates the developments in respiratory medicine in recent years It outlines the importance of epidemiology in respiratory medicine and will prove a methodological tool that will help disease management It should also be used as an advocacy tool for the sake of public health Pediatric Respiratory Medicine Lynn Max Taussig, Louis I. Landrigan, Ruth A. Etzel, 2013-11-15 Over the past four decades the prevalence of autism asthma ADHD obesity diabetes and birth defects have grown substantially among children around the world Not coincidentally more than 80 000 new chemicals have been developed and released into the global environment during this same period Today the World Health Organization attributes 36% of all childhood deaths to environmental causes Children s environmental health is a new and expanding discipline that studies the profound impact of chemical and environmental hazards on child health Amid mounting evidence that children are exquisitely sensitive to their environment and that

exposure during their developmental windows of susceptibility can trigger cellular changes that lead to disease and disability in infancy childhood and across the life span there is a compelling need for continued scientific study of the relationship between children's health and environment The Textbook of Children's Environmental Health codifies the knowledge base and offers an authoritative and comprehensive guide to this important new field Edited by two internationally recognized pioneers in the area this volume presents up to date information on the chemical biological physical and societal hazards that confront children in today s world pesticides indoor and outdoor air pollution lead arsenic phthalates bisphenol A brominated flame retardants ionizing radiation electromagnetic fields and the built environment It presents carefully documented data on rising rates of disease in children offers a critical summary of new research linking pediatric disease with environmental exposures and explores the cellular molecular and epigenetic mechanisms underlying diseases of environmental origin With this volume s emphasis upon integrating theory and practice readers will find practical approaches to channeling scientific findings into evidence based strategies for preventing and identifying the environmental hazards that cause disease in children It is a landmark work that will serve as the field s benchmark for years to come **4D Modeling and Estimation** of Respiratory Motion for Radiation Therapy Jan Ehrhardt, Cristian Lorenz, 2013-05-30 Respiratory motion causes an important uncertainty in radiotherapy planning of the thorax and upper abdomen The main objective of radiation therapy is to eradicate or shrink tumor cells without damaging the surrounding tissue by delivering a high radiation dose to the tumor region and a dose as low as possible to healthy organ tissues Meeting this demand remains a challenge especially in case of lung tumors due to breathing induced tumor and organ motion where motion amplitudes can measure up to several centimeters Therefore modeling of respiratory motion has become increasingly important in radiation therapy With 4D imaging techniques spatiotemporal image sequences can be acquired to investigate dynamic processes in the patient s body Furthermore image registration enables the estimation of the breathing induced motion and the description of the temporal change in position and shape of the structures of interest by establishing the correspondence between images acquired at different phases of the breathing cycle In radiation therapy these motion estimations are used to define accurate treatment margins e q to calculate dose distributions and to develop prediction models for gated or robotic radiotherapy In this book the increasing role of image registration and motion estimation algorithms for the interpretation of complex 4D medical image sequences is illustrated Different 4D CT image acquisition techniques and conceptually different motion estimation algorithms are presented The clinical relevance is demonstrated by means of example applications which are related to the radiation therapy of thoracic and abdominal tumors. The state of the art and perspectives are shown by an insight into the current field of research The book is addressed to biomedical engineers medical physicists researchers and physicians working in the fields of medical image analysis radiology and radiation therapy Respiratory Medicine Mary Ip, Moira Chan-Yeung, Wah Kit Lam, Nan Shan Zhong, 2005-01-01 This is the first book to focus on respiratory health and diseases in

Asia where 60% of the world's population reside It is well known that disease patterns and health care delivery vary in different parts of the world With divergent socioeconomic background genetic makeup and environmental factors health care issues take on a unique perspective in Asia In this volume respiratory health and diseases are presented and discussed with relevance to their unique epidemiology and management in Asia The chapters are contributed by professional leaders who are highly respected for their clinical expertise in respiratory medicine in different parts of Asia Many of them are internationally renowned for their academic excellence Their collective extensive experience offers a wealth of knowledge that is invaluable to readers not only in Asia but also to other parts of the world The high mobility of populations exposes clinicians to people from all over the world in their daily clinical practice This informative book is a useful reference equally for medical students clinicians in training and respiratory specialists The editors of this volume are Professors Mary Ip Moira Chan Yeung and Wah Kit Lam of the University of Hong Kong and Professor Nan Shan Zhong Director of the Guangzhou Institute of Respiratory Disease Encyclopaedia of Occupational Health and Safety Jeanne Mager Stellman, 1998 Revised and expanded this edition provides comprehensive coverage of occupational health and safety A new CD ROM version is available which provides the benefits of computer assisted search capabilities Allergy, Immunity and **Tolerance in Early Childhood** Hans Ulrich Wahn, Hugh A.
