**Biochemistry of Scandium and Yttrium, Part 1: Physical and Chemical Fundamentals** Chaim T. Horovitz, 1999-11-30 Biochemistry of Scandium and Yttrium gathers together existing knowledge about scandium and yttrium from a wide variety of disciplines Part 1 will present a comparative study of the physical and chemical properties of scandium and yttrium looking at both their similarities and their differences Part 2 will address the biochemical aspects of these two elements and the various medical and environmental applications While these elements are relatively rare in nature these books will show that they have unusual physical and chemical properties and a disproportionate number of important applications Improved analytical techniques have revealed that scandium and yttrium are present throughout living matter even though only a relatively limited number of species have been analyzed so far This fact of course has far ranging implications for biological and environmental concerns Part 1 also contains a discussion of the interactions of scandium and yttrium with molecules of biological interest such as organic acids carbohydrates proteins nucleotides and other biologically active molecules The major impacts of scandium and yttrium in science technology and medicine will be of interest to a wide variety of researchers including geochemists inorganic and organic chemists clinical biochemists and those specializing in environmental protection Biochemistry of Scandium and Yttrium Part 1 and Part 2 will be especially welcome because the last book published on the biochemistry of scandium appeared over 20 years ago and the only book mentioning the biochemistry of yttrium came out in 1990

**Cardiac Allograft Rejection** G. William Dec, Manel Ballester, 2001-09-30 Heart transplantation remains one of the major scientific achievements of twentieth century medicine During the past four decades it has evolved from an unproven experimental surgical technique to the most effective form of therapy for refractory end stage heart disease It has captured the public's

imagination and expanded our understanding of fundamental immunologic mechanisms that are responsible for cellular and humorally mediated immunity. Despite its successes many clinical and scientific problems remain. One or more bouts of acute cellular or humoral vascular rejection will occur in over 75% of transplant recipients despite current immunosuppressive strategies. Further rejection directly results in approximately 20% of post transplant deaths and is believed to play a major role in the development of late allograft dysfunction and coronary vasculopathy. This book by international experts in the fields of transplantation medicine, immunobiology and cardiac imaging provides the reader with an up to date concise summary of the latest developments in the diagnosis and treatment of acute cardiac rejection. It is axiomatic that a more complete understanding of the pathogenic processes involved in rejection will ultimately lead to its prevention. This volume will be useful to transplant cardiologists, cardiovascular surgeons, cardiac pathologists and transplant scientists who seek to prolong the lifespan and improve the quality of life of their transplant recipients.

**Role of CD1- and MR1-restricted T cells in Immunity and Disease** Kazuya Iwabuchi, Luc Van Kaer, 2019-10-18 CD1 and MR1 are major histocompatibility complex MHC class I related proteins that bind and present non peptide antigens to subsets of T cells with specialized functions. CD1 proteins typically present lipid antigens to CD1 restricted T cells whereas MR1 presents vitamin B based ligands and a variety of drugs and drug like molecules to MR1 restricted T cells. The CD1 family of antigen presenting molecules has been divided into two groups. Group 1 contains CD1a, CD1b and CD1c and Group 2 contains CD1d. Additionally CD1e is expressed intracellularly and is involved in the loading of lipid antigens onto Group 1 CD1 proteins. Humans express both Groups 1 and 2 CD1 proteins whereas mice only express CD1d. Group 1 CD1 proteins present lipid antigens to T cells that generally express diverse T cell receptors (TCRs) and exhibit adaptive like functions whereas CD1d presents lipid antigens to subsets of T cells that express either diverse or highly restricted TCRs and exhibit innate like functions. CD1d restricted T cells are called natural killer T (NKT) cells which includes Type I or invariant NKT (iNKT) cells expressing semi invariant TCRs and Type II NKT cells expressing more diverse TCRs. CD1 restricted T cells have been implicated in a wide variety of diseases including cancer, infections and autoimmune, inflammatory and metabolic diseases. Additionally NKT cells have been targeted for immunotherapy of disease with ligands such as galactosylceramide for iNKT cells or sulfatide for Type II NKT cells. Like iNKT cells MR1 restricted T cells express semi invariant TCRs and display innate like functions. MR1 restricted T cells also called mucosal associated invariant T (MAIT) cells have been implicated in immune responses against a variety of pathogens such as *Mycobacterium tuberculosis*, *Pseudomonas aeruginosa*, *Helicobacter pylori*, hepatitis C virus and influenza virus. Moreover these cells contribute to autoimmune and inflammatory diseases including colitis, rheumatoid arthritis, psoriasis, lupus and diabetes.
