Falke, 2012-12-06 I am particularly pleased to be able to write the introduction to this book that resulted from a collaborative effort by the Radiology Department under the auspices of the Boerhaave Committee for Postgraduate Medical Education of the Faculty of Medicine at the University of Leiden and the Department of Medical Imaging and Radiological Sciences at Van derbilt University Magnetic resonance imaging affords the opportunity to interrogate organ and system structure and function in a nondestructive manner without serious biological implications Tissue contrast with this modality is exquisite and inherently superior to that of x ray computed tomography The advances to improve signal capture development of rapid data acquisition techniques fabrication of more appropriate pulse sequences and availability of contrast agents portend increased versatility and specificity of these studies Despite the proliferation of numerous general and specialized texts the developments in MRI occur at such a pace that data in these references are necessarily dated The technical horizon of MRI is vast with almost limitless possibilities of signal generation and plan reconstruction Tissue contrast is so importantly affected by the coupling of signal generation and capture that collective experience of institutions and investigators is extremely important to the initiate and useful even to those individuals with the greatest clinical experience **The TBI Annual Research Index** Arokiasamy, 1990-01-01 With survival rates increasing for persons sustaining head injuries and the number of TBI programs

exceeding 1000 nationwide the need for access to information is more important than ever This publication presents a compendium of bibliographic information available worldwide on head injury through 1990 The TBI Annual Research Index is divided into three major sections Post Acute Acute and Books Bibliographies Presents in 33 chapters information is compiled from worldwide sources e g print computerized data bases and publishers and more than 1 500 entries on traumatic brain injury are included

Limb Salvage F. Langlais,B. Tomeno,2012-12-06 An international group of researchers has met every 2 years since 1981 to examine the progress made in limb salvage techniques and the perspectives of this field of surgery In 1989 the Fifth International Symposium On Limb Salvage ISOLS was held in Saint Malo and was attended by more than 300 participants from 34 different countries The 105 papers presented grouped under eleven main headings have been included in this book Limb salvage has indeed progressed in the years since the first symposium Initially it essentially concerned tumours and the main aim was to salvage the diseased limb through non mutilating surgery without jeopardizing the patient s prospects of survival Now with a confirmed high rate of 5 year disease free survival new goals can be set improvement of the functional results and of the survival of our reconstructions How can this be achieved By favouring muscle reattachment on the prosthesis for instance through the use of a bone allograft sleeved composite prosthesis By improving the survival of the arthroplasty through the develop ment of a more biological fixation of

its stems By limiting the side effects of the necessary adjuvant treatments on the function of the allograft as well as on the fixation of the prosthesis In addition limb salvage procedures now concern not only primary tumours and metastases which must be treated using the same osteosynthetic and prosthetic techniques but also reconstructive orthopaedic surgery as a whole
