Metals, Microbes, and Minerals - The Biogeochemical Side of Life Peter Kroneck,Martha Sosa Torres,2021-01-18 One of the biggest questions in today s biochemistry is how biological molecules became essential for the processes that occur within living cells This new book from outstanding Metal Ions in Life Science series gives an overview about biochemical evolution of organic molecules and metabolic pathways in living systems and outlines the vital biochemical processes in microbial cells in which metals are involved

Transition Metal Nuclear Magnetic Resonance P. S. Pregosin,1991 Transition metal NMR spectroscopy has progressed enormously in recent years New methods and specifically solid state methods and new pulse sequences have allowed access to data from nuclei with relatively low receptivities with the result that chemists have begun to consider problems previously inaccessible Moreover theory and computational science in particular now permits the calculation of not just ^{13}C ^{15}N and other light nuclei chemical shifts but also heavy main group elements and transition metals This combined with increasing access to high field pulsed spectrometers has produced a wealth of new data on NMR of transition metals understanding and using the nuclear magnetic resonance spectra of the metals of Groups 3 12 The reader is provided with a view on how these nuclei are currently being approached and what

information can be obtained The authors have liberally reproduced spectra as well as correlations relating metal NMR data to different physical characteristics of their molecules

Structure and Function Peter Comba, 2009-12-02 The art of chemistry is to thoroughly understand the properties of molecular compounds and materials and to be able to prepare novel compounds with predicted and desirable properties The basis for progress is to fully appreciate and fundamentally understand the intimate relation between structure and function The thermodynamic properties stability selectivity redox potential reactivities bond breaking and formation catalysis electron transfer and electronic properties spectroscopy magnetism depend on the structure of a compound Nevertheless the discovery of novel molecular compounds and materials with exciting properties is often and to a large extent based on serendipity For compounds with novel and exciting properties a thorough analysis of experimental data state of the art spectroscopy magnetism thermodynamic properties and or detailed mechanistic information combined with sophisticated electronic structure calculations is performed to interpret the results and fully understand the structure properties and their interrelation From these analyses new models and theories may emerge and this has led to the development of efficient models for the design and interpretation of new materials and important new experiments The chapters in this book therefore describe various fundamental aspects of structures dynamics and physics of molecules and materials The approaches data and models discussed include new theoretical developments computational studies and experimental work from molecular chemistry to biology and materials science
