Magnetic Sources:

Electromagnetic Sources and Electromagnetic Fields Gaobiao Xiao, 2024-01-16 This book presents a modified spherical harmonic expansion method in which the electromagnetic fields and their sources are expanded with the same set of spherical vector basis functions in a similar procedure Explicit expressions for the electromagnetic fields potentials energies and the related Green's functions are derived for the spherical modes in both frequency domain and time domain Based on the formulation the relationships between the electromagnetic sources the electromagnetic far fields and the electromagnetic near fields are clearly revealed In particular a nonuniform transmission line model is developed for intuitively characterizing the total radiation process The introduction of the cutoff radius and the cutoff mode degree provides a simple reference for determining the numbers of degrees of freedom of the fields associated with sources in a bounded region Based on the theory an efficient hybrid method for synthesizing antenna arrays with complex footprints is proposed and demonstrated with several numerical examples Effective algorithms are also developed for reconstructing the radiating part of the current sources This book is intended for researchers engineers and graduate students who are interested in studying the energy transfer in electromagnetic radiation synthesis and measurement of antenna arrays and applications of inverse electromagnetic source problems

The use of geosciences for exploring and predicting natural resources Ahmed M. Eldosouky, Amin Beiranvand Pour, Luan Thanh Pham, Biswajeet Pradhan, 2023-03-03 *Advances in Solar Research at Eclipses from Ground and from Space* Jean-Paul Zahn, Magda Stavinschi, 2012-12-06 The aim of this Advanced Study Institute was to give an account on the most recent results obtained in solar research. Bucharest was chosen to host it because the capital city of Romania was located right in the middle of the totality path of the last eclipse of the millennium on 11th August 1999. Furthermore, the phenomenon was close to reach there its longest duration 2m 23s. Such a total eclipse is not only a very spectacular event which draws the crowds, but astronomers' solar eclipses still offer the best conditions for observing the lower part of the corona. The Sun plays a crucial role in our very existence. It was responsible for the formation of the Earth and rendered this planet fit to host living beings providing the right amount of heat and this for a long enough span of time. Quite understandably, it has always been a prime target of human curiosity and more recently one of scientific investigation. During the last century, it was realized that the Sun is a star like billions of others we learned since that it draws its energy from the nuclear fusion of hydrogen and we are now able to estimate its age and life expectancy.
