## **Salt Lakes:**

Saline Lakes John M. Melack, 2012-12-06 Limnological research on saline lakes is practiced by a growing cadre of scientists active worldwide in a diversity of disciplines. Every three years since 1979 an international symposium on inland saline waters has served to strengthen and expand the scope of the studies. Promising areas for further research especially well suited to saline lakes include the comparative physiology of adaptation to osmotic stresses, the role of microbial and protozoan communities in nutrient dynamics and biotic interactions in ecosystems with few species. The Third International Symposium on Inland Saline Lakes was held at the University of Nairobi, Nairobi, Kenya, under the auspices of the Societas Internationalis Limnologiae (SIL). The symposium was sponsored by and received financial or other support from the U.S. National Science Foundation, International Program, United Nations Environment Program, University of California, Santa Barbara, and University of Nairobi. The proceedings occurred for three days, 28-31 August 1985, and were attended by 33 scientists from 14 countries (see list of Participants). On the day prior to the first formal session, an afternoon trip to Lake Magadi and salt works was held. The tribulations of this excursion served to acquaint the participants with each other and with the realities of exploring the African bush. A three-day post-congress expedition to the rift valley included visits to spectacular saline lakes such as Nakuru and Bogoria. Much of the meeting's success is owed to the efforts of the local organizer, Dr. Stephen G. **Salt in the Earth Sciences** Webster Mohriak, 2025-08-12 A comprehensive review of salt deposition in sedimentary environments worldwide. Salt is formed when water rich in evaporite minerals accumulates on the Earth's surface and then evaporates. Over time, pressure and tectonics change the structure and shape of salt layers. Recent technological advances have improved the interpretation and modeling of subsurface salt structures. **Salt in the Earth Sciences: Evaporite Rocks and Salt Deposition** presents a global overview of salt deposition and deformation in sedimentary basins, synthesizing data, analysis, observations, theories, and modeling. Volume highlights include: Overview of salt use by humans from prehistoric times to the modern industrial world; Chemical and physical principles of evaporite deposition in sedimentary basins; Effects of gravity and tectonic forces on rock salt deformation; Development of salt structures in orogenic belts and deep basins; Seismic interpretation methods for identification of subsurface salt structures; Key sedimentological models for evaporite deposition in continental and marine environments; Global examples ranging from modern hypersaline rift lakes to ancient marine salt basins. Browse the other volume in this set: **Salt in the Earth Sciences: Basin Analysis and Salt Tectonics**. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals. **Lakes** John Richard Saylor, 2022-06-07 In **Lakes: Their Birth, Life, and Death**, John Richard Saylor shows us just how deep our connection to these still waters runs in a revealing look at life-giving bodies of water.
