Los Planetas I Know About:

Witnessing beyond the Human Kate Jenckes, 2017-05-01 Provides an innovative and theoretically rigorous approach to the subject of testimony in Latin America This book rethinks the nature of testimony beyond the ground of the human in works produced in Chile and Argentina from the 1970s to the present Focusing on literature by Juan Gelman Sergio Chejfec and Roberto Bolaño as well as art by Eugenio Dittborn Kate Jenckes argues that these works represent life death and the relation between self and other beyond the human that is beyond the sense that we can know and represent ourselves and others with powerful implications for our understanding of history community and politics Jenckes engages with the work of Jacques Derrida together with the intellectually rigorous field of Chilean aesthetic theory to explore issues related to the nature of testimony

The British Book Trade and Spanish American Independence Eugenia Roldán Vera, 2017-03-02 The British Book Trade and Spanish American Independence is a pioneering study of the export of books from Britain to early independent Spanish America which considers all phases of production distribution reading and re writing of British books in the region and explores the role that these works played in the formation of national identities in the new countries Analysing in particular the publishing house of Rudolph Ackermann which dominated the export of British books in Spanish to the former colonies in the 1820s it discusses the ways in which the printed form of these publications affected the knowledge conveyed by them After a survey of the peculiar characteristics of print culture in early independent Spanish America and the trends in the import of European books in the region the author examines the operation of Ackermann's publishing enterprise She shows how the collaborative nature of this enterprise involving a number of Spanish American diplomats as sponsors and Spanish exiles as writers and translators shaped the characteristics of its publications and how the notion of useful knowledge conveyed by them was deployed in the service of both commercial and educational concerns The hitherto unexplored mechanisms of book import distribution wholesale and retailing in Spanish America in the 1820s are also analysed as is the way in which the significance of the knowledge transmitted by those books shifted in the course of their production and distribution The author examines how the question and answer form of Ackermann's textbooks constrained both publishers and writers and oriented their readers relation with the texts She then looks at the various ways in which foreign knowledge was appropriated in the construction of individual social national and continental identities this is done through the study of a number of individual reading experiences and through the analysis of the editions and adaptations of Ackermann's textbooks during the nineteenth century

on and expand towards the more productive areas of Astronomy leaving aside Astrometry which we consider a vital area. Even when preparing themselves academically the astrometrists with their meticulous work do not find easily government support and ways to compete. The rapid development of detectors and observation techniques during the last decade has almost completely transformed Astronomy. The data collected from observation are once again the main source for the theoretical development of this science. Moreover, observations have often changed many theoretical concepts. Astrometry has not been left behind and the future almost magical observations include the space projects such as GAIA and SIM. These projects should be seen as the spur for the adaptation of Astrometry to the new era, making this area a basic one in the professional training of any astronomer. The astrometrist is the one who must enlarge his scope to encompass data interpretation, taking advantage of the meticulous and craftsman-like character that this work has always had in order to access the big data bases that will be generated and are in danger of being considered as sources of statistical information. This concern for the future of Astrometry was discussed in this meeting. ADeLA 2004 had two additional innovations. The first one consisted in including a workshop or a series of conferences on topics related to Astrometry addressed to students interested in astronomy. This meeting has offered the opportunity to gather important foreign researchers. The participation of ESO Vitacura Chile researchers in ADeLA 2004 as well as the usual ADeLA meeting participants facilitated a wide and diverse series of lectures on related topics. These lectures were addressed both in a pedagogical and a professional atmosphere which encouraged Venezuelan undergraduate and graduate students interested in or majoring in astronomy to participate in both events. The so-called Taller de ADeLA 2004 took place after the meeting on November 25 and 26. The workshop improved the relationships between the Venezuelan scientific and student communities. **Proceedings, American Philosophical Society (vol. 138, No. 1, 1994) ,**
