Magnetospheric Plasma Physics:

Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research David Southwood, Stanley W. H. Cowley FRS, Simon Mitton, 2015-08-20 This book makes good background reading for much of modern magnetospheric physics Its origin was a Festspiel for Professor Jim Dungey former professor in the Physics Department at Imperial College on the occasion of his 90th birthday 30 January 2013 Remarkably although he retired 30 years ago his pioneering and often maverick work in the 50 s through to the 70 s on solar terrestrial physics is probably more widely appreciated today than when he retired Dungey was a theoretical plasma physicist The book covers how his reconnection model of the magnetosphere evolved to become the standard model of solar terrestrial coupling Dungey s open magnetosphere model now underpins a holistic picture explaining not only the magnetic and plasma structure of the magnetosphere but also its dynamics which can be monitored in real time The book also shows how modern day simulation of solar terrestrial coupling can reproduce the real time evolution of the solar terrestrial system in ways undreamt of in 1961 when Dungey s epoch making paper was published Further contributions on current Earth magnetosphere research and space plasma physics included in this book show how Dungey s basic ideas have remained explanative 50 years on But the Festspiel also introduced some advances that possibly Dungey had not foreseen One of the contributions presented in this book is on the variety of magnetospheres of the solar system which have been seen directly during the space age discussing the variations in spatial scale and reconnection time scale and comparing them in respect of Earth Mercury the giant planets as well as Ganymede *Magnetospheric Plasma Physics* Atsuhiko Nishida, 1982 **Magnetospheric Plasma Physics A.**

Galeev, 1982-08-31 Studies related to the earth and planets along with their surroundings are of great concern for modern scientists Global geodynamics as represented by plate tectonics has now become one of the most powerful tools by which we can study the causes of earthquakes volcanic eruptions mountain formation and the like Various missions sent out to space manned or of the moon Mars Venus and unmanned brought out geoscientific features other planets Earthquake prediction that was the business of astrologers and fortune tellers some twenty years ago has now grown up to be an important science A number of destructive earthquakes were successfully forecast in the People s Republic of China In the light of the above mentioned and other accomplishments in geosciences we feel that it is a good thing to publish a series of monographs which review selected topics of earth and planetary sciences We are of course well aware of the fact that similar monographs have been and will be published from overseas publishers The series which we plan to publish will therefore stress Japanese work But we hope that the series will also include review articles by distinguished overseas authors *Kinetic Theory of the Inner Magnetospheric Plasma* George V. Khazanov, 2010-10-01 The inner magnetosphere plasma is a very unique composition of different plasma particles and waves It covers a huge energy plasma range with spatial and time variations of many orders of magnitude In such a situation the kinetic approach is the key element and the starting point of the theoretical description of

this plasma phenomena which requires a dedicated book to this particular area of research *Frontiers in Magnetospheric Plasma Physics*, 2004-12-14 This COSPAR Colloquium Series deals with the main achievements that were accomplished through the collaborative efforts among ISTP participants the plasma dynamics of magnetic reconnection in a thin plasma sheet the action of the solar wind on the plasma population in the plasma sheet and around the magnetotail boundary layer the relationship between the substorm expansion region and the X line formation in the magnetotail and the temporal evolution of the dipolarization from the near Earth to the distant tail **Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research** David Southwood, Stanley W. H. Cowley FRS, Simon Mitton, 2015 This book makes good background reading for much of modern magnetospheric physics Its origin was a Festspiel for Professor Jim Dungey former professor in the Physics Department at Imperial College on the occasion of his 90th birthday 30 January 2013 Remarkably although he retired 30 years ago his pioneering and often maverick work in the 50 s through to the 70 s on solar terrestrial physics is probably more widely appreciated today than when he retired Dungey was a theoretical plasma physicist The book covers how his reconnection model of the magnetosphere evolved to become the standard model of solar terrestrial coupling Dungey's open magnetosphere model now underpins a holistic picture explaining not only the magnetic and plasma structure of the magnetosphere but also its dynamics which can be monitored in real time The book also shows how modern day simulation of solar terrestrial coupling can reproduce the real time evolution of the solar terrestrial system in ways undreamt of in 1961 when Dungey's epoch making paper was published Further contributions on current Earth magnetosphere research and space plasma physics included in this book show how Dungey's basic ideas have remained explanative 50 years on But the Festspiel also introduced some advances that possibly Dungey had not foreseen One of the contributions presented in this book is on the variety of magnetospheres of the solar system which have been seen directly during the space age discussing the variations in spatial scale and reconnection time scale and comparing them in respect of Earth Mercury the giant planets as well as Ganymede *Magnetospheric Plasma Physics* R. Bingham, 1989 *Space Physics* May-Britt Kallenrode, 2013-03-09 Space is a large natural plasma laboratory offering a wealth of phenomena which range from the simple to the highly complex and non linear This book begins with an introduction to basic principles such as single particle motion magnetohydrodynamics and plasma waves It incorporates these concepts into an analysis of complex phenomena including the sun and solar activity shocks interplanetary space and magnetospheres and finally the interaction between these entities in solar terrestrial relationships In all these subfields of space research special attention is paid to energetic particles The book concludes with a brief chapter on instrumentation In this third edition numerous examples have been added to illustrate the basic concepts and aid the reader in applying such concepts to real world physics In addition recent observations ACE TRACE Wind have been included The chapter on solar terrestrial relationships has been expanded to introduce the current research topic of Space Weather **Space Plasma Physics** A. C. Das, 2004-01-01 The book deals

with two principal topics that are closely linked basic plasma and space physics mostly related to solar system plasma The first part contains the basic plasma processes Physics of the Hot Plasma in the Magnetosphere Bengt Hultqvist, 2012-12-06 Nobel Symposium No 30 on the Physics of the Hot Plasma in the Magnetosphere was held at Kiruna Geophysical Institute Kiruna Sweden from April 2-4 1975 Some 40 leading experts from America USSR and Western Europe attended the Symposium The purpose of the meeting was to review and discuss the physics of the hot plasma in the magnetosphere with special emphasis on unsolved problems on which attention needs to be focused during the International Magnetospheric Study 1976-1978 The field is very extensive and complete coverage of all aspects was of course not possible The radiation belts proper were for instance not covered There were no formal contributed papers but much time was devoted to discussion These proceedings contain all review papers except the one by R Z Sagdeev They are ordered by subject starting after the introductory lecture with the problem of how the plasma enters the magnetosphere and ending with the question of the interaction with the ionosphere The Organizing Committee for the symposium was composed of the following Swedish scientists E A Brunberg C G Fälthammar I Hultén B Hultqvist chairman L Stenflo and H Wilhelmsson The Symposium was financed by the Nobel Foundation through grants from the Tercentenary Foundation of the Bank of Sweden by the Swedish Board for Space Activities and the Royal Swedish Academy of Sciences which is gratefully acknowledged Appreciated contributions in natura were also received from the town of Kiruna and the LKAB Company
