a full and often harrowing account of the circumstances of the loss and the number of casualties The details come from extensive original research using primary source material wherever possible particularly the relevant War Diaries and the collected loss and damage reports casualty reports and reports of proceedings now in the National Archives Wartime losses of the Dominions are included to ensure completeness This comprehensive record of warship losses from all causes suffered by the Royal Navy over the past one hundred years is the first single volume work on the subject and represents a major milestone in naval research and publishing

British Coastal Forces Norman Friedman, 2023-04-30 The Royal Navy invented the fast motor torpedo boat during the First World War and used it and other small coastal craft to great effect during the Second This book tells the dramatic story of British coastal forces both offensive and defensive in both World Wars and beyond In the Second World War British coastal forces fought a desperate battle to control the narrow seas particularly the Channel and the North Sea and took the war to the coasts of German occupied Europe fighting where larger warships could not be risked They also made a significant contribution to victory in the Mediterranean but it was primarily warfare in home waters that shaped wartime British Coastal Forces and left lessons for postwar development In this book Norman Friedman uniquely connects the technical story of the coastal craft and their weapons and other innovations with the way they fought In both world wars much of the technology was at the edge of what was feasible at the time Boats incorporated considerable British innovation and also benefited from important US contributions particularly in supplying high powered engines during World War II In contrast with larger warships British coastal forces craft were essentially shaped by a few builders and their part in the story is given full credit They also built a large number of broadly similar craft for air sea rescue and for completeness these are described in an appendix This fascinating dramatic story is also relevant to modern naval thinkers concerned with gaining or denying access to hostile shores The technology has changed but the underlying realities have not This book includes an extensive account of how coastal forces supported the biggest European example of seizing a defended shore the Normandy invasion That was by far the largest single British coastal forces operation demanding a wide range of innovations to make it possible Like other books in this series this one is based very heavily on contemporary official material much of which has not been used previously like the extensive reports of US naval observers who were allowed wide access to the Royal Navy as early as 1940 Combined with published memoirs these sources

offer a much more complete picture than has previously appeared of how Coastal Forces fought and of the way in which various pressures both operational and industrial shaped them

German S-Boats in Action in the Second World War Hans Frank, 2007-01-17 A detailed narrative of S boat or schnellboot actions during World War II in all the theatres where they were deployed The author describes with the help of a multitude of maps and photographs all the incidents that these 45 knot fast attack craft were involved in The German motor torpedo boat German S boot English E boat was a controversial subject in the pre war period of German naval rearmament

As late as 1938 the Fleet Commander recommended that S boot building be terminated on the grounds that the craft was merely a weapon of opportunity without a defined role This outlook changed dramatically after the first wartime successes Soon the S boot was required on all fronts and the area of operations In this volume the operational deployment of the S Boot in these theatres is given comprehensive treatment for the first time and not purely from the isolated viewpoint of S Boot warfare but as an integral part of the overall military objectives of the time This study of the effectiveness of the S Boot its successes and failures is based on war diary entries and previously unseen original sources It is a first class account of this German naval arm in which survived to be the last class of German surface warship still carrying the offensive to the enemy

Ships of the Royal Navy J.J. Colledge, Ben Warlow, 2010-02-28 The essential historical reference on British warships fully revised Right at the top of the must have list A book which will get much use Royal Navy and Maritime Book Reviews This is the fourth fully revised edition of a book first published in 1970 This longevity is testimony to its enduring value as a reference work indeed Colledge as the book is universally known is still the first stop for anyone wanting more information on any British warship from the fifteenth century to the present day when only the name is known Each entry gives concise details of dimensions armament and service dates and its alphabetical and chronological arrangement makes it easy to track down the right ship otherwise the Royal Navy s tradition of reusing the same names can be misleading When originally published the second of the two volumes was devoted to minor fighting ships and hired and requisitioned vessels For the third edition published in one volume this material was omitted but for this edition all the genuine fighting ships like the numbered Coastal Forces craft have been restored resulting in a convenient but comprehensive single volume listing of all significant vessels Since the death of Jim Colledge who was widely respected for his pioneering research on the technical details of warships his magnum opus has been updated corrected and expanded with similar enthusiasm and attention to detail by Ben Warlow a retired naval officer and author of a number of books in the field An amazing and immensely valuable work of dedicated and persistent research Baird Maritime British Naval Weapons of World War Two Norman Friedman, 2020-07-30 John Lambert was a renowned naval draughtsman whose plans were highly valued for their accuracy and detail by modelmakers and enthusiasts By the time of his death in 2016 he had produced over 850 sheets of drawings many of which have never been published These have now been acquired by Seaforth and this is the third of a planned series of albums on selected themes reproducing complete sheets at a large page size with an expert commentary and captioning The initial volumes concentrate on British naval weaponry used in the Second World War thus completing the project John Lambert was working on when he died His interest was always focused on smaller warships and his weapons drawings tend to be of open mountings the kind that present a real challenge to modelmakers rather than enclosed turret guns but he also produced drawings of torpedo tubes underwater weapons fire control directors and even some specific armament related deck fittings Following the earlier volumes on destroyer and escort armament this one covers the multitude of weapons

carried by Coastal Forces many of which were improvised ad hoc or obsolescent but eventually leading to powerful purpose designed weaponry An appendix covers the main deck guns carried by British submarines of this era The drawings are backed by introductory essays by Norman Friedman an acknowledged authority on naval ordnance while a selection of photographs adds to the value of the book as visual reference Over time the series will be expanded to make this unique technical archive available in published form a move certain to be welcomed by warship modellers enthusiasts and the many fans of John Lambert s work

Malta and British Strategic Policy, 1925-43 Douglas Austin, 2004 This book uses official records to show that Malta far from being written off was developed in the inter war years as a British offensive base and that the island s air and naval forces made a major contribution to Allied victory in North Africa

British Naval Weapons of World War Two, Volume III Norman Friedman, 2020-07-30 Lambert was a drafter of no mean skill his drawings are concise clear and invaluable to scratchbuilders and super detailers Very highly recommended Nautical Research Journal John Lambert was a renowned naval draftsman whose plans were highly valued for their accuracy and detail by modelmakers and enthusiasts By the time of his death in 2016 he had produced over 850 sheets of drawings many of which had never been published Now they have become available in these remarkable collections with expert commentary and captioning included The initial volumes concentrate on British naval weaponry used in the Second World War thus completing the project Lambert was working on when he died His interest was always focused on smaller warships and his weapons drawings tend to be of open mountings the kind that present a real challenge to modelmakers rather than enclosed turret guns but he also produced drawings of torpedo tubes underwater weapons fire control directors and even some specific armament related deck fittings Following the earlier volumes on destroyer and escort armament this one covers the multitude of weapons carried by Coastal Forces many of which were improvised ad hoc or obsolescent but eventually led to powerful purpose designed weaponry An appendix covering the main deck guns carried by British submarines of this era is included along with an introductory essay by naval ordnance authority Norman Friedman and a selection of photos

The Greatest Naval War Ever Fought Vincent O'Hara, 2025-10-14 The greatest naval conflict in history occurred during World War II from 1939 to 1945 Most people are familiar with the famous Battle of the Atlantic and epic naval engagements in the Pacific like Midway and Leyte Gulf all of which receive ample coverage in this panoramic work However author Vince O Hara offers a truly global perspective of World War II at sea that captures every aspect of a vast naval conflict that involved dozens of nations more than 15 000 ships and 43 7 million tons of shipping Approximately 570 000 lives were lost at sea in those six years Here the naval action begins in the Baltic Sea before dawn on September 1 1939 when a German battleship opened fire on Polish troops barricaded in a fortress in the port city of Danzig Poland Over the ensuing nine months the conflict spread into Great Britain s home waters of the North Sea the English Channel and the eastern Atlantic One of the most remarkable naval achievements of the war occurred in 1940 during the German invasion of Norway The Kriegsmarine s successful attack in the

face of immensely superior Allied naval forces was the war's first large scale amphibious operation. As naval activities in Europe expanded into the Mediterranean, the war in the Pacific exploded with the Japanese attack on Pearl Harbor in December 1941. That assault led to a series of critical naval battles between Japan and the United States including Wake Island, Coral Sea, Midway, and Guadalcanal. O'Hara not only deftly examines all the major naval contests in the European and Pacific theaters but also offers detailed analysis of secondary navies such as France, Italy, and the Soviet Union. He explores little known smaller engagements such as the campaigns between Thailand and France or Peru and Ecuador. O'Hara connects this broad range of naval action by focusing on recurring themes of technological innovation, command and control, logistics, and intelligence. He demonstrates that there was more than one path to winning sea power and that the most important naval platforms to emerge from the war were the oiler, the Landing Ship, Tank (LST), and the Liberty ship, not the aircraft carrier, the submarine, or the battleship. O'Hara makes clear to readers that the impact of the naval battles won by the Allies still reverberates today.

The War of the Gun Boats Bryan Cooper, 2009-07-19. This WWII naval history chronicles the development of small fighting boats as well as the evolution of their tactics and coastal warfare operations. Small, fast, and highly maneuverable gunboats and motor torpedo boats were a vital part of naval combat through the Second World War. Every major naval power built their own versions. The Germans had Schnellboote, the Royal Navy had MTBs and MGBs, and the Americans had PT boats. With their daring night raids and close range battles, they displayed the buccaneering spirit of an earlier age. These small boats fought in coastal waters across the globe, from the narrow waters of the English Channel to the stormy North Sea, in the Mediterranean off the coasts of North Africa and Italy, and among the islands of the Aegean, across the Pacific from Pearl Harbor to Leyte Gulf, in Hong Kong and Singapore, and off Burma's Arakan coast. In *The War of the Gun Boats*, historian Bryan Cooper traces the development of these craft, beginning with their limited use in the First World War and the fast motorboats designed to break water speed records in the 1930s. Cooper then details their widespread implementation during the Second World War and the development of their own form of naval warfare.

Allied Coastal Forces of World War II: Volume I John Lambert, Al Ross, 2018-10-30 The major contribution made by Coastal Forces to the Allied war effort has had surprisingly little coverage in the literature of the Second World War Motor torpedo boats PT boats motor gunboats launches and submarine chasers served with distinction throughout the War and in every theatre They performed invaluable service as patrol boats convoy escorts minelayers and minesweepers harbour defence vessels light landing craft RAF rescue boats and transports for agents and clandestine missions Allied Coastal Forces now a recognised classic work and first published in 1990 remains the only publication to deal comprehensively in words photographs and drawings with the technical detail of all these boats Design construction and subsequent development are all covered and the builders construction lists fates and the technical data are given for each type Separate sections cover armament and equipment sea going qualities and habitability This first volume covers all the designs of the Fairmile Marine Company including those craft built and equipped for Canada together with the 72ft Harbour Defence Motor Launch and the US Navy 110ft subchaser The authors firmly established as the recognised authorities on small warships unearthed a remarkable body of information now included in this major work and their finely detailed drawings redrawn from original builders plans offer an unparalleled view of all these remarkable designs The new editions of their work will be welcomed by naval enthusiasts and modellers alike **Ships Monthly** ,2003 The War for the Seas Evan Mawdsley, 2019-09-24 This impeccable myth busting study of WWII maritime operations sheds new light on the conflict with sharp analysis and an international perspective The Sunday Times UK Command of the oceans was crucial to winning World War II By the start of 1942 Nazi Germany had conquered mainland Europe and Imperial Japan had overrun Southeast Asia and much of the Pacific How could Britain and distant America prevail in what had become a war of continents In this definitive account Evan Mawdsley traces events at sea from the first U boat operations in 1939 to the surrender of Japan He argues that the Allied counterattack involved not just decisive sea battles but a long struggle to control shipping arteries and move armies across the sea Covering all the major actions in the Atlantic and Pacific oceans as well as those in the narrow seas this book interweaves for the first time the endeavors of the maritime forces of the British Empire the United States Germany and Japan as well as those of France Italy and Russia Warship ,2008
