[Landscapes and Landforms of the Maltese Islands](#)

Ritienne Gauci, John A. Schembri, 2019-08-04 This edited volume brings together a collection of works that comprehensively address both the myriad geomorphological landscapes of the Maltese Islands and how their evolution has been shaped over various time scales by different sets of processes. Additionally, the work highlights how the small geographical setting of the Maltese Islands helped to closely connect these landscapes with Maltese society and as a result they have evolved from stand alone examples of geomorphology to important backdrops of Maltese cultural identity. Most of the contributing authors are academics both local and foreign with a research focus on the geomorphology of the Maltese Islands. However, the editors have also and purposefully chosen other contributors from governmental institutions and research agencies who complement the geomorphological research with their proactive work in selected case studies on Maltese landscapes. New Trends in Soil Micromorphology

Selim Kapur, Georges Stoops, 2008-08-17 The soil water retention curve, the saturated hydraulic conductivity and the unsaturated hydraulic conductivity function are basic soil hydraulic functions and parameters. Ample apprehension of the soil hydraulic functions and parameters is required for a successful formulation of the principles leading to sustainable soil management, agricultural production and environmental protection. From these, all the other parameters required in the solution of the practical tasks are derived. The basic soil hydraulic functions are strongly dependent upon the soil porous system. The development of models is characteristic by the gradual transition from the simplest concepts up to the sophisticated approaches which should correspond to the visual reality studied by soil micromorphology.

2 Soil Porous System and Soil Micromorphometry

2.1 An Overview on the Quantification of the Soil Porous System

Quantification of the soil porous system consists of classification of soil pores, characterization of the soil pores shapes and the estimation of the pore size distribution function. When the hydraulic functions of the soil pores are considered, the following laws of hydrostatics and hydrodynamics are applied as best fitting to the classification criteria of the size of the pores.

Kutilek and Nielsen 1994, p. 20
Kutilek 2004. A. Submicroscopic pores that are so small that they preclude clusters of water molecules from forming fluid particles or continuous water flow paths. Advances in Environmental Research

Charles V. Rades, Evan B. Tiesman, 2008
The environment consists of the surroundings in which an organism operates, including air, water, land, natural resources, flora, fauna, humans and their interrelation. It is this environment which is both so valuable on the one hand and so endangered on the other. And it is people which are by and large ruining the environment both for themselves and for all other organisms. This series covers leading edge research in a cross section of fields centring on the environment.
