Mycotoxins in Food and Beverages Didier Montet, Catherine Brabet, Ramesh C. Ray, Sabine Galindo, 2021-06-10

Mycotoxins are secondary metabolites produced by fungi in a wide range of foods cereals peanut tree nuts dried fruits coffee cocoa grapes spices both in the field and after harvest particularly during storage They can also be found in processed foods of plant origin or by transfer in food products of animal milk eggs meat and offal Mycotoxins are of major concern since they can cause acute or chronic intoxications in both humans and animals which are sometimes fatal Many countries particularly in Europe have set maximum acceptable levels for mycotoxins in food and feed The book reviews the latest literature and innovations on important aspects of mycotoxins e g mycotoxin producing fungi and the related ecosystems mycotoxin occurrence toxicity analysis and management Quantitative estimations of impacts of climate change on mycotoxin occurrence have been made recently using predictive modelling There is also a growing interest in the occurrence and toxicity of multiple mycotoxins in food and feed including emerging or modified forms of mycotoxins Innovative tools were also developed to detect and quantify toxinogenic fungi and their toxins In order to reduce the use of chemicals that are harmful to the environment and health of consumers alternative methods of prevention and decontamination of mycotoxins were tested in pre and post harvest using microorganisms natural substances or radiation treatments **Food Safety** Richard J. Marshall, 2006-12-22 Food Safety A Practical and Case Study Approach the first volume of the ISEKI Food book series discusses how food quality and safety are connected and how they play a significant role in the quality of our daily lives Topics include methods of food preservation food packaging benefits and risks of microorganisms and process safety The ISEKI Food book series is a collection where various aspects of food safety and environmental issues are introduced and reviewed by scientists specializing in the field In all of the books special emphasis is placed on including case studies applicable to each specific topic The books are intended for graduate students and senior level undergraduate students as well as professionals and researchers interested in food safety and environmental issues applicable to food safety ISEKI Food is an acronym for Integrating Safety and Environmental Knowledge Into Food Studies Participants in the ISEKI Food network coordinated by Professor Cristina Silva at The Catholic University of Portugal come from 29 countries in Europe and most of the institutes and universities involved with Food Science education at the university level in Europe are represented Some international companies and non teaching institutions have also participated in the network The main objectives of ISEKI Food are to improve the harmonization of studies in food science and engineering in Europe and to develop and adapt food science curricula emphasizing the inclusion of safety and environmental topics Determining Mycotoxins and Mycotoxigenic Fungi in Food and Feed Sarah De Saeger, 2011-02-07 Mycotoxins toxic secondary metabolites produced by

mycotoxigenic fungi pose a significant risk to the food chain. Indeed, they may be the most hazardous of all food contaminants in terms of chronic toxicity and legislative limits on their levels in food and feed continue to be developed worldwide. Rapid and reliable methods for the determination of both mycotoxigenic fungi and mycotoxins in food and feed are therefore essential. This book reviews current and emerging methods in this area. Part one focuses on the essentials of mycotoxin determination covering sampling, sample preparation and clean up and key determination techniques such as chromatographic separation, liquid chromatography, mass spectrometry and immunochemical methods. Part two then goes on to describe quality assurance, official methods and performance criteria for determining mycotoxins in food and feed. Topics covered include laboratory accreditation, method validation and measurement uncertainty. The development and analysis of biomarkers for mycotoxins are discussed in part three. Individual chapters focus on detecting exposure in humans and animals. Part four is concerned with the processes involved in determining mycotoxigenic fungi in food and feed. It also describes the identification of genes and gene clusters involved in mycotoxin synthesis as well as DNA barcoding of toxigenic fungi. Finally, part five explores some of the emerging methods for mycotoxin analysis ranging from bio-sensing to spectroscopic techniques. With its distinguished editor and international team of contributors, *Determining mycotoxins and mycotoxigenic fungi in food and feed* is a standard reference for all those concerned with reducing mycotoxin contamination in the food chain. Focuses on the essentials of mycotoxin determination covering sampling, sample preparation, clean up and key determination techniques. Documents quality assurance and official methods and performance criteria for determining mycotoxins in food and feed. Explores the processes of determining mycotoxigenic fungi in food and feed including the identification of genes and gene clusters. *Mycotoxins* John F. Leslie, Ranajit Bandyopadhyay, A. Visconti, 2008. This book is an outcome of the MycoGlobe conference in Accra. Most of the chapters are based on invited oral presentations made at the conference. The chapters in this book touch on issues including health, trade, ecology, epidemiology, occurrence, detection, management, awareness and policy. This book serves as a source of information on the occurrence and impact of mycotoxins on everything from trade and health to agricultural production, in addition to suggesting opportunities for their management in Africa and elsewhere by researchers, policy makers and development investors. ***Mycotoxins and phycotoxins*** Henry Njapau, Socrates Trujillo, Hans van Egmond, Douglas Park, 2023-08-28. This book contains selected peer-reviewed papers of the IUPAC International Union of Pure and Applied Chemistry symposium *Mycotoxins and phycotoxins*. These symposia are the principal international interdisciplinary conventions focusing on occurrence, advances in determination, toxicology and exposure management of these bio-contaminants. The chapters are organized in sections that include up-to-date overviews of current mycotoxin and phycotoxin issues. Advances in analytical techniques using rapid screening tools, high sensitivity instrumental methods and their combinations applied for single and multi-toxin determinations are highlighted in a specific section of the book. Identification of requisite agronomic factors and pre-harvest forecasting for strategic intervention are

part of a treatise on exposure management Since the inception more than 30 years ago this IUPAC symposia series has grown in scope scientific novelty and value **Mycotoxins in Fruits and Vegetables** R. Barkai-Golan, Nachman Paster, 2011-09-02 Mycotoxins are toxins produced by aerobic microscopic fungus under special conditions of moisture and temperature They colonize in a variety of foods from harvest to the grocer Mycotoxins have gained world wide interest in recent years with the revelation of the effect of these toxins on health A current example is the presence of ochratoxin A a human carcinogen and nephrotoxin in wines The increased concern about fruit safety has led to increased studies throughout the world and enhanced awareness for stringent regulations governing mycotoxin limits in food Presented in three defined sections this is the first book to provide comprehensive analysis of the main mycotoxins contaminating fruits and vegetables and their derived products The first section provides a safety evaluation of mycotoxins in fruits and vegetables details regarding factors affecting mycotoxin production and diffusion in the fruit tissue and recent methods for detection of mycotoxigenic fungi and mycotoxins produced by the fungi The second part takes a critical look at the main individual mycotoxins and the third section focuses on approaches for prevention and control The first book dedicated to mycotoxins in fruits and vegetables Presents mycological mycotoxicological and phytopathological aspects of fruits and vegetables Includes an analysis of detection prevention and control methods for mycotoxigenic fungi and the mycotoxins they produce Provides a complete risk assessment and safety evaluation of mycotoxins in perishable produce **Mycotoxins** Patrick Berka Njobeh, Francois Stepman, 2019-08-28 This Edited Volume Mycotoxins Impact and Management Strategies is a collection of reviewed and relevant research chapters offering a comprehensive overview of recent developments in the field of Mycotoxicology The book comprises of single chapters authored by various researchers and edited by an expert active in this research area This book is divided into three sections Section 1 consists of one chapter that gives an overview of the socioeconomic impact of mycotoxins Section 2 has five chapters that address the prevention and control of aflatoxins both at pre and post harvest stages Section 3 has two chapters that deal with health impact and control in the poultry industry This publication aims at providing a thorough overview of the latest research efforts in the field and opens new possible research paths for further novel developments in addressing the problem of mycotoxins **Encyclopedia of Environmental Health**, 2008-09-01 Environmental health has evolved over time into a complex multidisciplinary field Many of the key determinants and solutions to environmental health problems lie outside the direct realm of health and are strongly dependent on environmental changes water and sanitation industrial development education employment trade tourism agriculture urbanization energy housing and national security Environmental risks vulnerability and variability manifest themselves in different ways and at different time scales While there are shared global and transnational problems each community country or region faces its own unique environmental health problems the solution of which depends on circumstances surrounding the resources customs institutions values and environmental vulnerability This work contains critical reviews and
