Current Issues in Computer Simulation Nabil R. Adam, Ali

Dogramaci,2014-05-09 Current Issues in Computer Simulation is a collection of papers dealing with computer simulation languages statistical aspects of simulation linkage with optimization and analytical models as well as theory and application of simulation methodology Some papers explain the General Purpose Simulation System GPSS a programming package incorporating a language to simulate discrete systems and the SIMSCRIPT a general purpose simulation language using English commands for example FORTRAN Another simulation language is the General Activity Simulation Program GASP providing for an organizational structure to build models to simulate the dynamic performance of systems on a digital computer Other papers discuss simulation models of real systems including corporate simulation models multistage consumer choice process determination of maximum occupancy for hospital facilities and the juvenile court system Many computer simulations are statistical sampling experiments performed on a model of the system under investigation Other papers discuss some of the variables involved in the statistical design and analysis of simulation experiments such as variance reduction techniques generation of random variates and experimental layout For example one application simulates inventory systems when many items are stocked in various locations The collection is suitable for programmers computer engineers businessmen hospital administrators schools officials and depositories of huge volumes of information or data

Fundamental Issues in Defense Training and Simulation George Galanis,Robert Sottolare,2017-05-15

Defense forces have always invested a great deal of their resources in training In recent times changes in the complexity and intensity of operations have reaffirmed the importance of ensuring that warfighters are adequately prepared for the environments in which they are required to work The emergence of new operational drivers such as asymmetric threats urban operations joint and coalition operations and the widespread use of military communications and information technology networks has highlighted the importance of providing warfighters with the competencies required to act in a coordinated adaptable fashion and to make effective decisions in environments characterized by large amounts of sometimes ambiguous information While investment in new technologies can make available new opportunities for action it is only through effective training that personnel can be made ready to apply their tools in the most decisive and discriminating fashion There are many factors which can have an impact on the efficacy of training and many issues to consider when designing and implementing training strategies These issues are often complex and nuanced and in order to grasp them fully a significant investment of time and energy is required However the requirement to respond quickly to ever changing technology a high operational tempo and minimal staffing may preclude many in today s defense forces from seeking out all such resources on their own This edited collection provides brief easy to understand summaries of the key issues in defense

training and simulation as well as guidance for further reading It consists of a collection of short essays each of which addresses a fundamental issue in defense training and simulation and features an up to date reference list to enable the reader to undertake further investigation of the issues addressed In essence this book provides the optimum starting point or first resource for readers to come to terms with the important issues associated with defense training and simulation The contributions are written by leading scholars from military research institutions in the US UK Canada Australia and New Zealand as well as selected researchers from academic and private sector research institutions *ECOS 2012 The 25th International Conference on Efficiency, Cost, Optimization and Simulation of Energy Conversion Systems and Processes (Perugia, June 26th-June 29th, 2012)* Umberto Desideri, Enrico Sciubba, Giampaolo Manfrida, 2012 The 8 volume set contains the Proceedings of the 25th ECOS 2012 International Conference Perugia Italy June 26th to June 29th 2012 ECOS is an acronym for Efficiency Cost Optimization and Simulation of energy conversion systems and processes summarizing the topics covered in ECOS Thermodynamics Heat and Mass Transfer Exergy and Second Law Analysis Process Integration and Heat Exchanger Networks Fluid Dynamics and Power Plant Components Fuel Cells Simulation of Energy Conversion Systems Renewable Energies Thermo Economic Analysis and Optimisation Combustion Chemical Reactors Carbon Capture and Sequestration Building Urban Complex Energy Systems Water Desalination and Use of Water Resources Energy Systems Environmental and Sustainability Issues System Operation Control Diagnosis and Prognosis Industrial Ecology
