Planet of Slums Mike Davis, 2007-09-17 The profound brilliant account of the rise of the world s slums and the failures of modern urbanization by the world s leading urbanist Arundhati Roy activist and Booker Prize winning author According to the United Nations more than one billion people now live in the slums of the cities of the South In this brilliant and ambitious book Mike Davis explores the future of a radically unequal and explosively unstable urban world From the sprawling barricadas of Lima to the garbage hills of Manila urbanization has been disconnected from industrialization and even from economic growth Davis portrays a vast humanity warehoused in shantytowns and exiled from the formal world economy He argues that the rise of this informal urban proletariat is a wholly unforeseen development and asks whether the great slums as a terrified Victorian middle class once imagined are volcanoes waiting to erupt

State of the World's Cities 2008/9 Un-Habitat, 2008 This report adopts the concept of Harmonious Cities as a theoretical framework in order to understand today s urban world and also as an operational tool to confront the most important challenges facing urban areas and their development processes It recognizes that tolerance diversity social justice and good governance all of which are inter related are as important to sustainable urban development as physical planning It addresses national concerns by searching for solutions at the city level For that purpose it focuses on three Key areas spatial or regional harmony which examines the main drivers of urban growth in the developing world and explores the spatial nuances of economic and social policies social harmony which presents and analyzes new data on urban inequalities

worldwide and describes the types of shelter deprivations experienced by slum dwellers in developing world regions and environmental harmony which examines the role of cities in the climate change debate and the impact of global warming on the most vulnerable cities The report also assesses the various intangible assets within cities that contribute to harmony such as cultural heritage sense of place and memory and the complex set of social and symbolic relationships that give cities meaning It argues that these intangible assets represent the soul of the city and are as important for harmonious urban development as tangible assets BOOK JACKET *Marginalization in Urban China* F. Wu, C. Webster, 2010-10-28 This book covers social inequalities in Chinese cities and provides comparative perspectives on inequality and social polarization neoliberalization and the poor the change of property rights rural to urban migration and migrants enclaves deprivation and residential segregation state social security and reemployment training programs **Globalization and Urban**

Development Harry W. Richardson, Chang-Hee C. Bae, 2006-03-30 Most research on globalization has focused on macroeconomic and economy wide consequences This book explores an under researched area the impacts of globalization on cities and national urban hierarchies especially but not solely in developing countries Most of the globalization urban research has concentrated on the global cities e g New York London Paris Tokyo that influence what happens in the rest of the world In contrast this research looks at the cities at the receiving end of the forces of globalization The general finding is that large cities on balance benefit from globalization although in some cases at the expense of widening spatial inequities

Megacities and the Coast Mark Pelling, Sophie Blackburn, 2014-01-03 Based on a major international study this volume provides a synthesis of scientific knowledge on megacity urbanization on the coast environmental impacts risks and management choices including a focus on adaptation mitigation and disaster risk management It is the primary output of a major international scientific project sponsored by the International Geosphere Biosphere Programme the Land Ocean Interactions at the Coastal Zone programme of IHDP IGBP and others It brings together the work of over 60 contributing authors and an international review board It presents the international policy and academic community with an unbiased and high quality assessment of the state of the art in areas of social ecological systems interaction One of its main messages is that while we know a great deal about megacities of more than ten million people and about urban processes and about coasts and their physical and ecological processes aquatic physical and atmospheric there is relatively little work that focusses primarily at points of intersection between large scale urbanization and the coast The book responds to this gap by providing the first global synthesis of megacity and large urban region urbanization on the coast Its focus is on environmental and development challenges climate change and disaster It is interdisciplinary and brings together world recognised scientists including many IPCC lead authors on urban climate and atmosphere disaster risk management demography and coastal environments
