Megascience and Its Background Organisation for Economic Co-operation and Development, 1993 On cover title page Megascience the OECD forum *Operational Oceanography* H.W.A. Behrens, J.C. Borst, J.P. van der Meulen, L.J. Droppert, J.H. Stel, 1997-12-12 GOOS is an international programme for a permanent global framework of observations modelling and analysis of ocean variables which are needed to support operational services around the world The EuroGOOS strategy has two streams the first is to improve the quality of marine information in European home waters and the second is to collaborate with similar organisations in other continents to create a new global ocean observing and modelling system that will provide the open ocean forecasts needed to achieve the best possible performance by local marine information services everywhere The EuroGOOS strategy envisages our national agencies making a major contribution to that challenging task of globalizing ocean forecasting The conference also provided an opportunity to take stock of the state of marine science and technology in Europe relevant to the EuroGOOS strategy and the state of information services and customer needs Global Mega-Science David P. Baker, Justin J.W. Powell, 2024-04-23 Never has the world been as rich in scientific knowledge as it is today But what are its main sources In accessible and engaging fashion Global Mega Science examines the origins of this unprecedented growth of knowledge production over the past hundred and twenty years David P Baker and Justin J W Powell integrate sociological and historical approaches with unique scientometric data to argue that at the heart of this phenomenon is the unparalleled cultural success of universities and their connection to science the university science model Considering why science is so deeply linked to higher educational development the authors analyze the accumulation of capacity to produce research and demonstrate how the university facilitates the emerging knowledge society The age of global mega science was built on the symbiotic relationship between higher education and science especially the worldwide research collaborations among networked university based scientists These relationships are key for scholars and citizens to understand the past future and sustainability of science Legitimizing ESS Thomas Kaiserfeld, Tom O'Dell, 2015-01-01 Big Science is a broad epithet that can be associated with research projects that involve huge budgets big facilities complex instrumentation years of planning and large multidisciplinary teams of researchers Legitimizing the ESS examines the complexity of the cultural social and political processes from which and in which Big Science develops by focusing on the planning and development of the European Spallation Source ESS that is to be located in Lund in southern Sweden Together the chapters represent a variety of perspectives to highlight the complexity of the processes that are integral to Big Science Thus this volume examines the very different roles Big Science may be given in different contexts locally regionally nationally internationally as well as historically Bits of Power National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Committee on Issues in the Transborder Flow of Scientific Data, 1997-08-07 Since Galileo corresponded with

International partnerships in large science projects. ,1995 Over the past several decades the federal government has supported a wide range of research projects in science and technology Federal support has been crucial to many of the most important research and development R D achievements in defense space energy environmental and other science and technology programs Recently however federal budget deficits and concerns about the effectiveness of research efforts have intensified pressures on government R D spending making it difficult to sustain many ongoing efforts and limiting opportunities for new ventures These pressures coupled with the increasingly international character of science and technology R D activities have focused greater attention on bilateral and multilateral collaborative arrangements particularly for large scale long term projects in areas such as particle physics energy and environmental science and space The United States has pursued international collaborative projects in R D to raise the likelihood of scientific success for particularly complex endeavors to take greater advantage of international scientific expertise and facilities to address science and technology issues that have global implications to extend national scientific capabilities and especially for very large science projects to share costs and risks with other nations International collaboration however poses special challenges such as establishing R D priorities within and across different scientific disciplines developing funding and planning mechanisms that ensure the long term stability of projects and maintaining U S economic and national security interests
