Megawatts And Megatons The Future Of Nuclear Power And Nuclear Weapons:

Megawatts and Megatons Richard L. Garwin, Georges Charpak, 2002-12-15 In Megawatts and Megatons world renowned physicists Richard L Garwin and Georges Charpak offer an accessible eminently well informed primer on two of the most important issues of our time nuclear weapons and nuclear power They begin by explaining clearly and concisely how nuclear fission and fusion work in both warheads and reactors and how they can impact human health Making a strong and eloquent argument in favor of arms control Garwin and Charpak outline specific strategies for achieving this goal worldwide But they also demonstrate how nuclear power can provide an assured economically feasible and environmentally responsible source of energy in a way that avoids the hazards of weapons proliferation Numerous figures enliven the text including cartoons by Monitoring Nuclear Weapons and Nuclear-Explosive Materials National Research Council, Policy and Global Affairs, Committee on International Security and Arms Control, 2005-04-15 In this study CISAC tackles the technical dimensions of a longstanding controversy To what extent could existing and plausibly attainable measures for transparency and monitoring make possible the verification of all nuclear weapons strategic and nonstrategic deployed and nondeployed plus the nuclear explosive components and materials that are their essential ingredients. The committee's assessment of the technical and organizational possibilities suggests a more optimistic conclusion than most of those concerned with these Wisdom of the Martians of Science Istvan E. T. Al HARGITTAI, 2015-12-10 Wisdom of the issues might have expected Martians of Science refers to five scientists whose brilliance contributed to shaping the modern world John von Neumann was a pioneer of the modern computer Theodore von K rm n was the scientist behind the US Air Force Leo Szilard initiated the development of nuclear weapons the Nobel laureate Eugene P Wigner was the world's first nuclear engineer and Edward Teller was the father of the hydrogen bomb They were born and raised in Budapest were forced out of Hungary and then from Germany they became Americans and devoted themselves to the defense of the United States and the Free World They contributed significant discoveries to fundamental science ranging from the properties of materials to the application of the symmetry principle in physics to creating information theory to game theory. The areas in which we can learn about their wisdom include applications of science to past present and future real world needs defense education environment human nature humor politics religion weather modification and others This book shows the wisdom of the Martians by presenting their thoughts and ideas in their own words and placing them into context Their wisdom is intriguing witty provocative and thought provoking It extended over many aspects of life and culture that impinge on our existence While we cannot always agree with what they say they are never boring The power of their words and their philosophies will inspire the readers to pursue their own dreams Nuclear Energy Nicholas Tsoulfanidis, 2012-12-12 Nuclear Energy provides an authoritative reference on all aspects of the nuclear industry from fundamental reactor physics calculations to reactor design nuclear fuel resources nuclear fuel cycle radiation detection and protection and nuclear power economics Featuring 19 peer reviewed

Doomsday Men P. D. Smith,2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard's doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish real scientists from that fictional master of megadeath Stanley Kubrick's Dr Strangelove Indeed as P D Smith's chilling account Doomsday Men shows the dream of the superweapon begins in popular culture This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells's

The War of the Worlds to Nevil Shute's On the Beach and Kubrick's Dr Strangelove or How I Learned to Stop Worrying and Love the Bomb Although scientists admitted it was possible to build the cobalt bomb no superpower would admit to having created one However it remained a terrifying possibility striking fear into the hearts of people around the world The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century s most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias He argues that in the end the doomsday machine became the ultimate symbol of humanity's deepest fears about the science of destruction Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicos Publishers Weekly Critical Perspectives on Energy and Power Linley Erin Hall, 2006-08-15 Examines contemporary issues on energy resources and power covering such topics as fossil fuels nuclear energy energy storage and alternative energy sources Bounding Power Daniel H. Deudney, 2010-12-16 Realism the dominant theory of international relations particularly regarding security seems compelling in part because of its claim to embody so much of Western political thought from the ancient Greeks to the present Its main challenger liberalism looks to Kant and nineteenth century economists Despite their many insights neither realism nor liberalism gives us adequate tools to grapple with security globalization the liberal ascent and the American role in their development In reality both realism and liberalism and their main insights were largely invented by republicans writing about republics. The main ideas of realism and liberalism are but fragments of republican security theory whose primary claim is that security entails the simultaneous avoidance of the extremes of anarchy and hierarchy and that the size of the space within which this is necessary has expanded due to technological change In Daniel Deudney's reading there is one main security tradition and its fragmentary descendants This theory began in classical antiquity and its pivotal early modern and Enlightenment culmination was the founding of the United States Moving into the industrial and nuclear eras this line of thinking becomes the basis for the claim that mutually restraining world government is now necessary for security and that political liberty cannot survive without new types of global unions Unique in scope depth and timeliness Bounding Power offers an international political theory for our fractious and perilous global village Building The H Bomb: A Personal History Kenneth W Ford, 2015-03-25 In this engaging scientific memoir Kenneth Ford recounts the time when in his mid twenties he was a member of the team that designed and built the first hydrogen bomb He worked with and relaxed with scientific giants of that time such as Edward Teller Enrico Fermi Stan Ulam John von Neumann and John Wheeler and here offers illuminating insights into the personalities the strengths and the quirks of these men Well known for his ability to explain physics to nonspecialists Ford also brings to life

the physics of fission and fusion and provides a brief history of nuclear science from the discovery of radioactivity in 1896 to the ten megaton explosion of Mike that obliterated a Pacific Island in 1952 Ford worked at both Los Alamos and Princeton s Project Matterhorn and brings out Matterhorn's major but previously unheralded contribution to the development of the H bomb Outside the lab he drove a battered Chevrolet around New Mexico a bantam motorcycle across the country and a British roadster around New Jersey Part of the charm of Ford's book is the way in which he leavens his well researched descriptions of the scientific work with brief tales of his life away from weapons **Nuclear Energy and Global Governance** Trevor Findlay, 2010 Annihilation from Within Fred Charles Iklé, 2006 Globalization guarantees the spread of new technologies whether beneficial or destructive and this proliferation reaches beyond North Korea Iran and other rogue states Our greatest threat is a cunning tyrant who might gain a few weapons of mass destruction and annihilate a nation's government from within assuming dictatorial power. The twentieth century offers vivid examples of tyrants who have exploited major national disasters by rallying violent followers and intimidating an entire nation To explain how we have become so vulnerable Fred Ikle turns to history Some 250 years ago science was freed from political and religious constraints causing a cultural split Since then science has advanced at an accelerating pace while religion and politics have moved along a zigzag course This divergence will widen and endanger the survival of nations Drawing on his experience as a Washington insider Ikle outlines the practical measures that could be implemented to help us avert catastrophe Special Warfare ,2013 The Grid Phillip F. Schewe, 2007-02-20 The electrical grid goes everywhere it s the largest and most complex machine ever made Yet the system is built in such a way that the bigger it gets the more inevitable its collapse Named the greatest engineering achievement of the 20th century by the National Academy of Engineering the electrical grid is the largest industrial investment in the history of humankind It reaches into your home snakes its way to your bedroom and climbs right up into the lamp next to your pillow At times it almost seems alive like some enormous circulatory system that pumps life to big cities and the most remote rural areas Constructed of intricately interdependent components the grid operates on a rapidly shrinking margin for error Things can and do go wrong in this system no matter how many preventive steps we take Just look at the colossal 2003 blackout when 50 million Americans lost power due to a simple error at a power plant in Ohio or the one a month later which blacked out 57 million Italians And these two combined don t even compare to the 2001 outage in India which affected 226 million people The Grid is the first history of the electrical grid intended for general readers and it comes at a time when we badly need such a guide As we get more and more dependent on electricity to perform even the most mundane daily tasks the grid's inevitable shortcomings will take a toll on populations around the globe At a moment when energy issues loom large on the nation's agenda and our hunger for electricity grows The Grid is as timely as it is compelling
