Howell G. M. Edwards,2021-11-09 The material for this book arose from the author s research into porcelains over many years as a collector in appreciation of their artistic beauty as an analytical chemist in the scientific interrogation of their body paste enamel pigments and glaze compositions and as a ceramic historian in the assessment of their manufactory foundations and their correlation with available documentation relating to their recipes and formulations A discussion of the role of analysis in the framework of a holistic assessment of artworks and specifically the composition of porcelain namely hard paste soft paste phosphatic bone china and magnesian is followed by its growth from its beginnings in China to its importation into Europe in the 16th Century A survey of European porcelain manufactories in the 17th and 18th Centuries is followed by a description of the raw materials minerals and recipes for porcelain manufacture and details of the chemistry of the high temperature firing processes involved therein The historical backgrounds to several important European factories are considered highlighting the imperfections in the written record that have been perpetuated through the ages The analytical chemical information derived from the interrogation of specimens from fragments shards or

perfect finished items is reviewed and operational protocols established for the identification of a factory output from the data presented Several case studies are examined in detail across several porcelain manufactories to indicate the role adopted by modern analytical science with information provided at the quantitative elemental oxide and qualitative molecular spectroscopic levels where applicable The attribution of a specimen to a particular factory is either supported thereby or in some cases a potential reassessment of an earlier attribution is indicated Overall the information provided by analytical chemical data is seen to be extremely useful for porcelain identification and for its potential attribution in the context of a holistic forensic evaluation of hitherto unknown porcelain exemplars of questionable factory origins *The International Studio* ,1907

Miller, 2004-03 This is not a history of chemistry which uses stamps instead of the usual illustrations but a collection of short essays and comments on such chemistry as can be found on postage stamps and other philatelic items In other words the choice of topics is dictated by the philatelic material available with the necessary consequence that important parts of chemical history will be missing for the simple reason that they have not found their way onto postage stamps Thus the reader may find detailed comments on lesser known chemists such as Wilhelm August Lampadius who has been honoured with two stamps by the German Post Office but hardly anything on such luminaries as Robert Bunsen who have not been deemed worthy of a commemorative issue     Routledge Library Editions: German History Various, 2021-07-14 Originally published between 1929 and 1991 the volumes in this set Offer a comprehensive and challenging interpretation of the German past Assess Bismarck's contribution to the German Empire and his legacy for modern Germany Examine the psyche of the Germans and discuss the psychological impact of the Second World War on the Germans Review critically not only the rise and rule of National Socialism but also the strength of authoritarianism and militarism and the weakness of democracy in 19th Century Germany Examine the inter relationships between social and economic change on the one hand and political developments on the other Analyse the significance of the Zollverein on economic growth Discuss authority and the law in the German Empire and the Weimar Republic Analyse the contribution of German historians to 20th Century historiography Chart key events in British German trade rivalry Include archival material from both the former East and West Germany     **Ceramics, Glass and Glass-Ceramics** Francesco Baino, Massimo Tomalino, Dilshat Tulyaganov, 2021-10-22 This book presents a state of the art overview of the major aspects involved in the science technology and applications of ceramics glasses and glass ceramics After providing an historical perspective of the development and use of ceramics and glasses along the Silk Road the theoretical background and fabrication techniques of such materials are described and discussed A special focus is dedicated to emerging high tech applications in various fields including medicine energy optics and photonics sensors sustainability and circular economy The chapters are written by leading experts in their respective fields and highlight the contemporary challenges associated to each topic This book will serve as a valuable reference for

both early stage and skilled researchers as well as industry professionals interested in the broad field of glasses and ceramics
