Membrane-active Complexones I. U. Anatol'evich Ovchinnikov, Vadim Tikhonovich Ivanov, Aleksandr Moiseevich Shkrob, 1974 Biochemistry of Membrane Transport G. Semenza, E. Carafoli, 2012-12-06 This volume contains the proceedings of the FEBS Symposium on the Biochemistry of Membrane Transport which was held at the Swiss Institute of Technology Zurich July 18-23 1976 Of the speakers invited or originally only five could not attend the meeting and of the lectures given all but one of the texts are published here Thus this volume gives a faithful account of the way the meeting was originally conceived and actually took place This Symposium on Biochemistry of Membrane Transport was the first Symposium sponsored by the FEBS outside the yearly FEBS Meetings after the Special Meeting on Industrial Biochemistry which took place in Dublin in 1973 and it reflects the interest and the trend for gatherings of smaller size than the official FEBS Meetings The topic of the Symposium was an easy choice not only because membrane transport is becoming more and more important to biochemistry every year but also because of the long standing interest of Swiss Science in the field In the choice of the topics and of the speakers efforts were made to achieve as balanced a coverage of the area as possible However since some aspects of membrane biochemistry were dealt with extensively at the parallel 10th International Congress of Biochemistry in Hamburg certain topics were given less emphasis than others The Symposium was attended by about 400 participants we expected 200-250 among them 48 were invited speakers and some 200 contributed posters Structure of Biological Membranes Sixten Abrahamsson, 2013-03-08 Since 1965 the Nobel Foundation sponsors through grants from the Bank of Sweden Tercentenary Fund Symposia on subjects which are considered to be of central scientific importance and for which new results of a special interest have been reached The aim of these Symposia is to bring together by personal invitation a limited number of leading scientists from various countries to discuss the current research situation within the field and to define the most urgent problems to be solved One of the most important fields in modern biomedical research concerns the structure and function of biological membranes Research on this subject is very active and important scientific contributions appear at an increasing rate It was therefore considered highly appropriate to devote Nobel Symposium 34 to the structure of membranes in order to get an expert summary of what is now known in the field The Symposium was held at Hotel Billingeus in Skovde about 150 km from Goteborg Sweden from June 7 to 11 1976 In addition to the grant from the Nobel Foundation financial support was received from the Nobel Institute of Chemistry of the Royal Academy of Sciences and from the Science Fund of Wilhelm and Martina Lundgren The Symposium was attended by some 50 scientists The papers in this Volume had been distributed in advance to all participants Therefore only summary presentations needed be given at the Symposium and the main emphasis was put on discussions **Bioenergetics and Thermodynamics: Model Systems** A. Macrocyclic and Supramolecular Chemistry Reed M. Izatt, 2016-05-31 This book commemorates the 25th anniversary of the International Izatt Christensen Award in Macrocyclic and Supramolecular Chemistry The award one of the most prestigious of small awards in chemistry recognizes excellence in the developing field of macrocyclic and supramolecular chemistry Macrocyclic and Supramolecular Chemistry How Izatt Christensen Award Winners Shaped the Field features chapters written by the award recipients who provide unique perspectives on the spectacular growth in these expanding and vibrant fields of chemistry over the past half century and on the role of these awardees in shaping this growth During this time there has been an upsurge of interest in the design synthesis and

characterization of increasingly more complex macrocyclic ligands and in the application of this knowledge to understanding molecular recognition processes in host guest chemistry in ways that were scarcely envisioned decades earlier In October 2016 Professor Jean Pierre Sauvage and Sir J Fraser Stoddart author for chapter 22 Contractile and Extensile Molecular Systems Towards Molecular Muscles by Jean Pierre Sauvage Vincent Duplan and Fr d ric Niess and 20 Serendipity by Paul R McGonigal and J Fraser Stoddart respectively were awarded the Nobel Prize in Chemistry alongside fellow Wiley author Bernard Feringa for the design and synthesis of molecular machines

Weber, 2012-12-06 The scientific and practical interest in coronands crown ethers cryptands podands as complexing agents for cations as well as for anions and neutral low molecular species is undeniable 1 2 The chemistry of crown compounds is steadily increasing About 250 original papers dealing with crown chemistry appeared only in 1980 New molecules with crown ether properties are constantly synthesized and new applications discovered Owing to lack of space only a small number of the original publications is mentioned here Thus in the literature compilation only some but relevant works are selected for each chapter Whenever possible reference is made to reviews or review like articles alone by means of which original works can be consulted The reviews given under ref 1 are considered to be the most relevant The formulae presented in the figures should be understood as representative structures outlining a specific field 2 Classification of Oligo Multidentate Neutral Ligands and of their Complexes Today a distinction is made between the classical ring oligoethers crown ethers and monocyclic coronands oligocyclic spherical cryptands and the acyclic podands with respect to topological aspects 3 This classification and the topology are illustrated in Fig 1 each figure representing the minimum number of donor atoms and chain segments characteristic of each class of compounds Multidentate monocyclic ligands with any type of donor atoms are called coronands crown compounds while the term crown ether should be reserved for cyclic oligoethers exclusively containing oxygen as donor atom

Structural and Functional Relationships in Prokaryotes Larry L. Barton, 2005-11-24 For several decades bacteria have served as model systems to describe the life processes of growth and metabolism In addition it is well recognized that prokaryotes have contributed greatly to the many advances in the areas of ecology evolution and biotechnology This understanding of microorganisms is based on studies of members from both the Bacteria and Archaea domains With each issue of the various scientific publications new characteristics of prokaryotic cells are being reported and it is important to place these insights in the context of the appropriate physiological processes Structural and Functional Relationships in Prokaryotes describes the fundamental physiological processes for members of the Archaea and Bacteria domains The organization of the book reflects the emphasis that I have used in my 30 years of teaching a course of bacterial physiology The philosophy used in the preparation of this book is to focus on the fundamental features of prokaryotic physiology and to use these features as the basis for comparative physiology Even though diverse

phenotypes have evolved from myriad genetic possibilities these prokaryotes display considerable functional similarity and support the premise that there is a unity of physiology in the prokaryotes The variations observed in the chemical structures and biochemical processes are important in contributing to the persistence of microbial strains in a specific environment

Macromolecular Protein Complexes III: Structure and Function J. Robin Harris, Jon Marles-Wright, 2020-11-30 This book covers important topics such as the dynamic structure and function of the 26S proteasome the DNA replication machine structure and dynamic function and the structural organization and protein protein interactions in the human adenovirus capsid to mention but a few The 18 chapters included here written by experts in their specific field are at the forefront of scientific knowledge The impressive integration of structural data from X ray crystallography with that from cryo electron microscopy is apparent throughout the book In addition functional aspects are also given a high priority Chapter 1 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Photosynthetic Protein Complexes Petra Fromme, 2008-11-21 Perfectly timed this handbook covers many important aspects of the topic that have only recently been understood making this a truly comprehensive work With its extensive use of color it surveys the most important proteins involved in photosynthesis discussing the structural information we have at our disposal Most chapters are dedicated to one protein while a few also summarize general associated concepts The book also has an accompanying website that contains data files and animations to allow readers to visualize many of the complicated proteins presented A must for anyone studying photosynthesis and structural biology as well as those working in the plant and crop biotechnology industry

Theoretical Immunology, Part One Alan S. Perelson, 2018-03-05 Assuming that the complex phenomena underlying the operation of the immune system may be better understood through the collaborative efforts of theorists and experimentalists viewing the same phenomena in different ways the Sante Fe Institute and the Theoretical Division of Los Alamos National Laboratory cosponsored a workshop entitled Theoretical Immunology The workshop focused on themes spanning the field of immunology with emphasis on areas where the theorists have made the most progress This book covers the discussions at that workshop on the topics of immune surveillance mathematical models of HIV infection complexities of antigen antibody systems immune suppression and tolerance and idiotypic networks In each of these areas there is reason to believe that advances can be made either through interactions among experimentalists and theorists or through the critical look experimentalists and theorists will bring to bear upon one another's work

The Structural Basis of Arrestin Functions Vsevolod V. Gurevich, 2017-05-24 This volume summarizes our current understanding of the structural basis of the functions of arrestin family of proteins Arrestins were first discovered as key players in the desensitization of G protein coupled receptors GPCRs Recent studies showed that arrestins are important signal transducers in their own right organizing multi protein complexes and scaffolding numerous signaling cascades that regulate cell proliferation differentiation and apoptotic death Here arrestin functions are described primarily from the

structural prospective The book covers basal structure of arrestin proteins receptor binding induced conformational changes in arrestins as well as the structure of pre activated mutants Particular focus is on the arrestin elements interacting with numerous binding partners GPCRs and cytoplasmic signaling proteins We expect that this information and insights will help to understand and exploit the phenomenon of signaling bias which is a new promising direction in drug discovery The chapters are written by the world class specialists in the field mostly the people who actually contributed the data discussed The book gives coherent historical prospective and describes the most recent findings The book would be particularly useful for scientists in academia and industry working in the fields of pharmacology cell biology structural biology and drug discovery We expect that the focus on the molecular basis of protein protein interactions would help to develop novel tools for engaging this important type of targets for research and therapeutic purposes **The Enzymes of Biological**

Membranes Anthony Martonosi, 2012-12-06 Much of the information currently available on the transport systems of bacterial and animal cell membranes and their mode of coupling to metabolic supply of energy can be found in this volume Consideration of the participating enzymes dictated the choice of topics Several transport systems where little information is available on the enzymology of the process are not included while separate chapters deal with γ glutamyl transpeptidase and intestinal disaccharidases which meet many of the requirements of transport enzymes The volume also includes two chapters on photosynthetic membranes as a general introduction to the topic Other aspects of biological transport and photosynthesis will be developed in detail in a forthcoming volume now in preparation These chapters reveal the excitement and rapid advance of the field the daily reports of new concepts new techniques and new experimental findings which instantly interact to generate further progress Our aim was to provide a starting point for those who are just beginning and an opportunity for others to stop take stock and start in a new direction My warmest thanks to all who contributed to this volume
