Membranes And Other Extendons:

Membranes And Other Extendons: Classical And Quantum Mechanics Of Extended Geometrical Objects Elena Eizenberg, Yuval Ne'eman, 1995-09-13 The interest in membranes and higher dimensional extended geometrical objects was inspired by the great successes of the string and superstring first in 1968-73 as a theory of hadrons and then since 1984 as a theory of everything a unified theory of all interactions including quantum gravity In particular membranes supermembranes and spinning membranes have been studied since 1985 an unexpected connection with supergravity opened in 1988 some new prospects for a quantized theory General theorems about higher dimensional p branes or extendons were also derived The subject is very promising whether as a more comprehensive fundamental unification or as a description of composite hadrons Where there are now probably some fifty texts of all kinds dealing with strings this is the first treatise on membranes and higher dimensional extendons

Matter Particled - Patterns, Structure And Dynamics: Selected Research Papers Of Yuval Ne'eman Remo Ruffini, Yosef Verbin, 2006-03-06 This unique volume contains a selection of more than 80 of Yuval Ne'eman's papers which represent his huge contribution to a large number of aspects of theoretical physics The works span more than four decades from unitary symmetry and quarks to questions of complexity in biological systems and evolution of scientific theories In keeping with the major role Ne'eman has played in theoretical physics over the last 40 years a collaboration of very distinguished scientists enthusiastically took part in this volume Their commentary supplies a clear framework and background for appreciating Yuval Ne'eman's significant discoveries and pioneering contributions

The Future Of The Universe And The Future Of Our Civilization V Burdyuzha, Grigory Khozin, 2000-04-19 The first of its kind the Symposium on the Future of the Universe and the Future of our Civilization examined the current status and future evolution of the Universe the Galaxy the stars and the Sun Among the major subjects of discussion were 1 How was our Universe born 2 How do the Sun and the stars evolve 3 What is the destiny of the solar system and the Universe 4 What are the origins and the future of the biosphere of the Earth 5 What are the prospects of survival of human civilization Special attention was devoted to analysis of humanitarian and philosophical problems of evolution of humankind on the planet Earth and in the Universe

Among them were methodological economic sociological and medical aspects of the progress of civilization Scientists from different countries put forward some practical proposals including those describing the possible ways out of the systemic crisis of our civilization

The Revolutions Of Scientific Structure Colin G Hales,2014-07-07 This book discusses two main cultural problems behind the failure of machine consciousness and artificial general intelligence AGI projects over many decades The first problem recognizes that building a conscious AGI means building an artificial scientist The book identifies the responsible pitfalls in mainstream scientific behavior and eliminates them by proposing a new operational framework for scientists called Dual Aspect Science The second problem arises because scholars involved in machine consciousness and AGI essentially aim to replicate brains with computers They are demonstrably not doing this and this failure has been prevalent since the rise of computers Instead the book discusses the possibility of doing real empirical neuroscience by means of artificial materials that literally do what the brain does Inspired by Thomas Kuhn one of the most influential philosophers of science of the twentieth century this compendium proposes a fresh perspective on machine consciousness on AGI and more generally on how the machinery of science might need to change to accommodate it

presents for the first time a systematic formulation of the geometric theory of noncommutative PDE s which is suitable enough to be used for a mathematical description of quantum dynamics and quantum field theory A geometric theory of supersymmetric quantum PDE s is also considered in order to describe quantum supergravity Covariant and canonical quantizations of super PDE s are shown to be founded on the geometric theory of PDE s and to produce quantum super PDE s by means of functors from the category of commutative super PDE s to the category of quantum super PDE s Global properties of solutions to super commutative PDE s are obtained by means of their integral bordism groups *Quark*

Stumbling Blocks Against

Unification: On Some Persistent Misconceptions In Physics Matej Pavsic,2020-03-24 The history is full of misconceptions that opposed the progress of physics The book starts with reviewing some historical cases such as the arguments against the Earth rotation or the famous problem of in the theory of electromagnetic mass of electron After having pointed out that misconceptions have been common in the history of physics it is argued that they must be present today as well In fact it is now commonly being realized that in the last forty years there has been no significant progress in the fundamental theoretical physics A reason certainly lies in certain stumbling blocks on our way towards the unification of interaction and of gravity with quantum mechanics The author discusses what he perceives as some persisting misconceptions that have not yet been recognized as such by physics community in general

Visions in

Mathematics Noga Alon,Jean Bourgain,Alain Connes,Misha Gromov,Vitali D. Milman,2011-03-31 Visions in Mathematics

Towards 2000 was one of the most remarkable mathematical meetings in recent years. It was held in Tel Aviv from August 25th to September 3rd 1999 and united some of the leading mathematicians worldwide. The goals of the conference were to discuss the importance of the methods of the past and the future of mathematics as we enter the 21st century and to consider the connection between mathematics and related areas. The aims of the conference are reflected in the present set of survey articles documenting the state of art and future prospects in many branches of mathematics of current interest. This is the first part of a two volume set that will serve any research mathematician or advanced student as an overview and guideline through the multifaceted body of mathematical research in the present and near future.

Eighth Marcel Grossmann Meeting, The: On Recent Developments In Theoretical And Experimental General Relativity, Gravitation, And Relativistic Field Theories - Proceedings Of The Meeting (In 2 Parts) Tsvi Piran, Remo Ruffini, 1999-05-14. Since 1975 the Marcel Grossmann Meetings have been organized to provide opportunities for discussing recent advances in gravitation, general relativity and relativistic field theories, emphasizing mathematical foundations, physical predictions and experimental tests. The objective of these meetings is to facilitate exchange among scientists that may deepen our understanding of space time structures and to review the status of ongoing experiments aimed at testing Einstein's theory of gravitation from either the ground or space. The Eighth Marcel Grossmann Meeting took place on 22-27 June 1997 at the Hebrew University of Jerusalem, Israel. The scientific program included 25 plenary talks and 40 parallel sessions during which 400 papers were presented. The papers that appear in this book cover all aspects of gravitation from mathematical issues to recent observations and experiments.
