This text then explains the requirements for a rational peptide synthesis, including controlled reaction conditions, retention of optical activity, high yields, and analogous applicability to free amino acids and to terminal amino acids of oligopeptides. Other chapters consider the general equation of the inner anhydride of acetic acid. This book discusses as well the relation between polarity and reactivity in phosphines. The final chapter deals with the methylation of aromatic compounds, which is a typical radical reaction. This book is intended for synthetic organic chemists. Graduate students and research workers in the fields of organic chemistry and biochemistry will find this book useful.
