# PATENT ABUSES KEEP PRESCRIPTION DRUGS UNAFFORDABLE

*Charlie Katelbi*

## TOPLINE POINTS

- ★ The cost of prescription drugs has skyrocketed over the past 10 years.
- ★ A key reason drugs are so expensive is that brand-name drug manufacturers abuse America's patent system and the Food and Drug Administration's drug approval process to artificially block generic competition and raise prices.
- ★ Policymakers can enhance competition and make prescription drugs more affordable by closing loopholes in America's patent system that allow brand-name drug manufacturers to delay competition.

America's patent system and the Food and Drug Administration's (FDA) drug approval process have promoted enormous pharmaceutical breakthroughs that have saved and improved the lives of millions of Americans. Unfortunately, both systems also contain numerous loopholes that allow drug manufacturers to block competitors from selling affordable generic versions of their drugs.

These patent abuses have significantly increased the cost of prescription drugs and made it harder for patients to access the medications they need. A plentiful supply of generic options is essential to lowering the cost of prescription drugs. Policymakers must close the loopholes in America's patent system and drug approval process and end these harmful abuses. This will ensure that families can access cutting-edge pharmaceutical innovations and affordable generic drugs.

Light, 2010-10-14 Few people realize that prescription drugs have become a leading cause of death disease and disability Adverse reactions to widely used drugs such as psychotropics and birth control pills as well as biologicals result in FDA warnings against adverse reactions The Risks of Prescription Drugs describes how most drugs approved by the FDA are under tested for adverse drug reactions yet offer few new benefits Drugs cause more than 2.2 million hospitalizations and 110 000 hospital based deaths a year Serious drug reactions at home or in nursing homes would significantly raise the total Women older people and people with disabilities are least used in clinical trials and most affected Health policy experts Donald Light Howard Brody Peter Conrad Allan Horwitz and Cheryl Stults describe how current regulations reward drug companies to expand clinical risks and create new diseases so millions of patients are exposed to unnecessary risks especially women and the elderly They reward developing marginally better drugs rather than discovering breakthrough life saving drugs The Risks of Prescription Drugs tackles critical questions about the pharmaceutical industry and the privatization of risk To what extent does the FDA protect the public from serious side effects and disasters What is the effect of giving the private sector and markets a greater role and reducing public oversight This volume considers whether current rules and incentives put patients health at greater risk the effect of the expansion of disease categories the industry's justification of high U.S. prices and the underlying shifts in the burden of risk borne by individuals in the world of pharmaceuticals Chapters cover risks of statins for high cholesterol SSRI drugs for depression and anxiety and hormone replacement therapy for menopause A final chapter outlines six changes to make drugs safer and more effective Suitable for courses on health and aging gender disability and minority studies this book identifies the Risk Proliferation Syndrome that maximizes the number of people exposed to these risks Additional Columbia
