*Fruit Preservation* Amauri Rosenthal, Rosires Deliza, Jorge Welti-Chanes, Gustavo V. Barbosa-Cánovas, 2018-11-05. Fruits and fruit based products are in most cases associated with very good sensory characteristics, health, well being, perishability, relatively easy to mix with food products of diverse origin, amenable to be processed by conventional and novel technologies. Given the multiplicity of aspects, whenever fruit preservation is considered, the editors took the challenge of covering in a thorough, comprehensive manner most aspects dealing with this topic. To accomplish these goals, the editors invited well known colleagues with expertise in specific disciplines associated with fruit preservation to contribute chapters to this book. Eighteen chapters were assembled in a sequence that would facilitate like building blocks to have at the same time a bird's eye view and an in depth coverage of traditional and novel technologies to preserve fruits. Even though processing took center stage in this book, ample space was dedicated to other relevant and timely topics on fruit preservation such as safety, consumer perception, sensory and health aspects. **FEATURES:** Traditional and Novel Technologies to Process Fruits, Microwaves, Ohmic Heating, UV C light, Irradiation, High Pressure Pulsed Electric Fields, Ultrasound, Vacuum Impregnation, Membranes, Ozone, Hurdle Technology, Topics Associated with Fruit Preservation, Safety, Nutrition and Health, Consumer Perception, Sensory, Minimal Processing, Packaging, Unit Operations for Fruit Processing, Cooling and Freezing, Dehydration, Frying. Novel Thermal and Non-Thermal Technologies for Fluid Foods P.J. Cullen, Brijesh K. Tiwari, Vasilis

Valdramidis, 2011-07-21. Food processing is the step of the food chain that principally affects a food's physical or biochemical properties along with determining the safety and shelf life of the product. This book provides a comprehensive overview of innovations in non thermal technologies specifically for fluid foods, recognized for their high bioavailability of macronutrients and micronutrients. Considerable resources and expertise has been devoted to the processing of safe and wholesome foods. Non thermal technologies have been developed as an alternative to thermal processing while still meeting required safety or shelf life demands and minimising the effects on its nutritional and quality attributes. Examines non thermal processing techniques specifically applied to fluid foods. Includes methods for mathematically evaluating each technique. Addresses global regulatory requirements for fluid foods. Provides recommendations and opportunities for various safety related issues.

*Innovative Food Processing Technologies* ,2020-08-18 Food process engineering a branch of both food science and chemical engineering has evolved over the years since its inception and still is a rapidly changing discipline While traditionally the main objective of food process engineering was preservation and stabilization the focus today has shifted to enhance health aspects flavour and taste nutrition sustainable production food security and also to ensure more diversity for the increasing demand of consumers The food industry is becoming increasingly competitive and dynamic and strives to develop high quality freshly prepared food products To achieve this objective food manufacturers are today presented with a growing array of new technologies that have the potential to improve or replace conventional processing technologies to deliver higher quality and better consumer targeted food products which meet many if not all of the demands of the modern consumer These new or innovative technologies are in various stages of development including some still at the R D stage and others that have been commercialised as alternatives to conventional processing technologies

Food process engineering comprises a series of unit operations traditionally applied in the food industry. One major component of these operations relates to the application of heat directly or indirectly to provide foods free from pathogenic microorganisms but also to enhance or intensify other processes such as extraction, separation or modification of components. The last three decades have also witnessed the advent and adaptation of several operations processes and techniques aimed at producing high quality foods with minimum alteration of sensory and nutritive properties. Some of these innovative technologies have significantly reduced the thermal component in food processing offering alternative nonthermal methods. Food Processing Technologies: A Comprehensive Review, Three Volume Set covers the latest advances in innovative and nonthermal processing such as high pressure, pulsed electric fields, radiofrequency, high intensity pulsed light, ultrasound, irradiation and new hurdle technology. Each section will have an introductory article covering the basic principles and applications of each technology and in depth articles covering the currently available equipment and or the current state of development, food quality and safety application to various sectors, food laws and regulations, consumer acceptance, advancements and future scope. It will also contain case studies and examples to illustrate state of the art applications. Each section will serve as an excellent reference to food industry professionals involved in the processing of a wide range of food categories e.g. meat, seafood, beverage, dairy, eggs, fruits and vegetable products, spices, herbs among others. **Handbook of**

**Fruits and Fruit Processing** Y. H. Hui, József Barta, M. Pilar Cano, Todd W. Gusek, Jiwan S. Sidhu, Nirmal K. Sinha, 2008-02-28. The processing of fruits continues to undergo rapid change. In the Handbook of Fruits and Fruit Processing Dr Y H Hui and his editorial team have assembled over forty respected academicians and industry professionals to create an indispensable resource on the scientific principles and technological methods for processing fruits of all types. The book describes the processing of fruits from four perspectives: a scientific basis, manufacturing and engineering principles, production techniques and processing of individual fruits. A scientific knowledge of the horticulture, biology, chemistry and nutrition of fruits forms the foundation. A presentation of technological and engineering principles involved in processing fruits is a prelude to their commercial production. As examples, the manufacture of several categories of fruit products is discussed. The final part of the book discusses individual fruits covering their harvest to a finished product in a retail market. As a professional reference book replete with the latest research or as a practical textbook filled with example after example of commodity applications, the Handbook of Fruits and Fruit Processing is the current comprehensive yet compact resource ideal for the fruit industry. **Food Preservation Techniques** Peter Zeuthen, Leif Bøgh-Sørensen, 2003-10-30.
