Presuppositions and Nontruth-conditional Semantics Deirdre Wilson, 1975

Conditionals, Paradox, and Probability Lee Walters, John Hawthorne, 2021-02-11 Conditionals Paradox and Probability brings together fifteen original essays by experts in philosophy and linguistics These specially written chapters draw on themes from the work of Dorothy Edgington the first woman to hold a chair in philosophy at the University of Oxford The contributors to this volume focus on the key topics to which Edgington has made many important contributions including conditionals vagueness the paradox of knowability and probability Their insights will be of interest to philosophers linguists and psychologists working in philosophical logic natural language semantics and reasoning

Replacing Truth Kevin Scharp, 2013-07-11 Kevin Scharp proposes an original theory of the nature and logic of truth on which truth is an inconsistent concept that should be replaced for certain theoretical purposes *Replacing Truth* opens with an overview of work on the nature of truth e.g. correspondence theories deflationism work on the liar and related paradoxes and a comprehensive scheme for combining these two literatures into a unified study of the concept truth Scharp argues that truth is best understood as an inconsistent concept and proposes a detailed theory of inconsistent concepts that can be applied to

the case of truth Truth also happens to be a useful concept but its inconsistency inhibits its utility as such it should be replaced with consistent concepts that can do truth's job without giving rise to paradoxes To this end Scharp offers a pair of replacements which he dubs ascending truth and descending truth along with an axiomatic theory of them and a new kind of possible worlds semantics for this theory As for the nature of truth he goes on to develop Davidson's idea that it is best understood as the core of a measurement system for rational phenomena e.g belief desire and meaning The book finishes with a semantic theory that treats truth predicates as assessment sensitive i.e their extension is relative to a context of assessment and a demonstration of how this theory solves the problems posed by the liar and other paradoxes

Assertion and Conditionals Anthony Appiah, 1985-09-19 This book develops in detail the simple idea that assertion is the expression of belief In it the author puts forward a version of probabilistic semantics which acknowledges that we are not perfectly rational and which offers a significant advance in generality on theories of meaning couched in terms of truth conditions It promises to challenge a number of entrenched and widespread views about the relations of language and mind Part I presents a functionalist account of belief worked through a modified form of decision theory In Part II the author generates a theory of meaning in terms of assertibility conditions whereby to know the meaning of an assertion is to know the belief it expresses
