A cultural history of chess-players John Sharples,2017-08-15 This inquiry concerns the cultural history of the chess player It takes as its premise the idea that the chess player has become a fragmented collection of images underpinned by challenges to and confirmations of chess s status as an intellectually superior and socially useful game particularly since the medieval period Yet the chess player is an understudied figure No previous work has shone a light on the chess player itself Increasingly chess histories have retreated into tidy consensus This work aspires to a novel reading of the figure as both a flickering beacon of reason and a sign of monstrosity To this end this book utilising a wide range of sources including newspapers periodicals detective novels science fiction and comic books is underpinned by the idea that the chess player is a pluralistic subject used to articulate a number of anxieties pertaining to themes of mind machine and monster

Nan-ching The Classic of Difficult Issues Paul U. Unschuld,1986-09-10 Although the study of traditional Chinese medicine has attracted unprecedented attention in recent years Western knowledge of it has been limited because until now not a single Chinese classical medical text has been available in a serious philological translation The present book offers for the first time in any Western language a complete translation of an ancient Chinese medical classic the Nan ching The translation adheres to rigid sinological

standards and applies philological and historiographic methods The original text of the Nan ching was compiled during the first century A D by an unknown author From that time forward this ancient text provoked an ongoing stream of commentaries Following the Sung era it was misidentified as merely an explanatory sequel to the classic of the Yellow Emperor the Huang ti nei ching This volume however demonstrates that the Nan ching should once again be regarded as a significant and innovative text in itself It marked the apex and the conclusion of the initial development phase of a conceptual system of health care based on the doctrines of the Five Phases and yinyang As the classic of the medicine of systematic correspondence the Nan ching covers all aspects of theoretical and practical health care within these doctrines in an unusually systematic fashion Most important is its innovative discussion of pulse diagnosis and needle treatment Unschuld combines the translation of the text of the Nan ching with selected commentaries by twenty Chinese and Japanese authors from the past seventeen centuries These commentaries provide insights into the processes of reception and transmission of ancient Chinese concepts from the Han era to the present time and shed light on the issue of progress in Chinese medicine Central to the book and contributing to a completely new understanding of traditional Chinese medical thought is the identification of a patterned knowledge that characterizes in contrast to the monoparadigmatic tendencies in Western science and medicine the literature and practice of traditional Chinese health care Unschuld s translation of the Nan ching is an accomplishment of monumental proportions Anthropologists historians and sociologists as well as general readers interested in traditional Chinese medicine but who lack Chinese language abilities will at last have access to ancient Chinese concepts of health care and therapy Filling an enormous gap in the literature Nan ching The Classic of Difficult Issues is the kind of landmark work that will shape the study of Chinese medicine for years to come

Brain

Injury and Recovery C. Robert Almli, Stanley Finger, T.E. LeVere, Donald G. Stein, 2012-12-06 The idea for the present volume grew from discussions that the four of us had among ourselves and with our colleagues at recent scientific meetings All of us were impressed by the wealth of empirical data that was being generated by investigators interested in brain damage and recovery from both behavioral and biological orientations Nevertheless we were concerned about the relative paucity of attempts to evaluate the data provided by new technologies in more than a narrow context or to present new theories or reexamine time honored ideas in the light of new findings We recognized that science is guided by new technologies by hard data and by theories and ideas Yet we were forced to conclude that although investigators were often anxious to publicize new methods and empirical findings the same could not be said about broad hypotheses underlying concepts or inferences and speculations that extended beyond the empirical data Not only were many scientists not formally discussing the broad implications of their data but when stimulating ideas were presented they were more likely to be heard in the halls or over a meal than in organized sessions at scientific meetings
