Drake D. Duane, Margaret B. Rawson, 1975 **Reading and Language Processing** John M. Henderson, Murray Singer, Fernanda Ferreira, 2013-11-19 This volume was designed to identify the current limits of progress in the psychology of reading and language processing in an information processing framework Leaders in their fields of interest the chapter authors couple current theoretical analyses with new formally presented experiments The research cutting edge and sometimes controversial reflects the prevailing analysis that language comprehension results in numerous levels of representation including surface features lexical properties linguistic structures and idea networks underlying a message as well as the situations to which a message refers As a group the chapters highlight the impact that input modality auditory or written has on comprehension Finally the studies also capture the evolution of new topic matter and ongoing debates concerning the competing paradigms global proposals and methods that form the foundation of the enterprise The book presents current accounts of research on word sentence and text processing It will prove informative for experimental psychologists as well as investigators in cognitive science disciplines such as computer science linguistics and educational psychology The book will also be very helpful to graduate students who wish to develop expertise in the psychology of language processes For them it collects in a single volume readings that are representative of progress concerning many central problems in the field As such it is distinct from the numerous collected volumes that concentrate on a single issue Complete author and subject indexes facilitate effective use of the volume **Language Development and Learning to Read** Diane McGuinness, 2006-08-11 Research on reading has tried and failed to account for wide disparities in reading skill even among children taught by the same method Why do some children learn to read easily and quickly while others in the same classroom and taught by the same teacher don't learn to read at all In *Language Development and Learning to Read* Diane McGuinness examines scientific research that might explain these disparities She focuses on reading predictors analyzing the effect individual differences in specific perceptual linguistic and cognitive skills may have on a child's ability to read Because of the serious methodological problems she finds in the existing research on reading many of the studies McGuinness cites come from other fields developmental psychology psycholinguistics and the speech and hearing sciences and provide a new perspective on which language functions matter most for reading and academic success McGuinness first examines the phonological development theory the theory that phonological awareness follows a developmental path from

words to syllables to phonemes which has dominated reading research for thirty years and finds that research evidence from other disciplines does not support the theory McGuinness then looks at longitudinal studies on the development of general language function and finds a tantalizing connection between core language functions and reading success Finally she analyzes mainstream reading research which links reading ability to specific language skills and the often flawed methodology used in these studies McGuinness s analysis shows the urgent need for a shift in our thinking about how to achieve reading success

Writing and Written Language Konrad Ehlich, Florian Coulmas, Gabriele Graefen, 2011-06-01 The bibliography offers information on research about writing and written language over the past 50 years No comprehensive bibliography on this subject has been published since Sattler's 1935 handbook With a selection of some 27 500 titles it covers the most important literature in all scientific fields relating to writing Emphasis has been placed on the interdisciplinary organization of the bibliography creating many points of common interest for literacy experts educationalists psychologists sociologists linguists cultural anthropologists and historians The bibliography is organized in such a way as to provide the specialist as well as the researcher in neighboring disciplines with access to the relevant literature on writing in a given field While necessarily selective it also offers information on more specialized bibliographies In addition an overview of norms and standards concerning script and writing will prove very useful for non professional readers It is therefore also of interest to the generally interested public as a reference work for the humanities Language at the Speed of Sight Mark

Seidenberg, 2017-01-03 In this important and alarming New York Times book see why so many American students are falling behind in their reading skills while others around the world excel The way we teach reading is not working and it cannot continue We have largely abandoned phonics based reading instruction despite research that supports its importance for word recognition Rather than treating Black English as a valid dialect and recognizing that speaking one dialect can impact the ability to learn to read in another teachers simply dismiss it as incorrect English And while we press children to develop large vocabularies because we think being a good reader means knowing more words studies have found that a large vocabulary is only an indication of better pattern recognition Understanding the science of reading is more important than ever for us and for our children Seidenberg helps us do so by drawing on cutting edge research in machine learning linguistics and early childhood development Language at the Speed of Sight offers an erudite and scathing examination of this most human of activities and concrete proposals for how our society can produce better readers Language

Awareness and Learning to Read J. Downing, R. Valtin, 2012-12-06 During the 1970s there was a rapid increase in interest in metacognition and metalinguistics The impetus came from linguistics psychology and psycholinguistics But with rather unusual rapidity the work from these scientific disciplines was taken over in education This new direction in these various areas of academic study was taken simultaneously by several different investigators Although they had varying emphases

their work sometimes appears to be overlapping despite this it has been rather difficult to find a consensus This is reflected in the varying terminology used by these independent investigators linguistic awareness metacognition metalinguistic ability task awareness lexical awareness and so on For educators these developments presented a glittering array of new ideas that promised to throw light on children's thinking processes in learning how to read Many reading researchers and graduate students have perceived this as a new frontier for the development of theory and research However the variety of independent theoretical approaches and their accompanying terminologies has been somewhat confusing

The Oxford Handbook of Reading Alexander Pollatsek, Rebecca Treiman, 2015 Writing is one of humankind's greatest inventions and modern societies could not function if their citizens could not read and write How do skilled readers pick up meaning from markings on a page so quickly and how do children learn to do so The chapters in the Oxford Handbook of Reading synthesize research on these topics from fields ranging from vision science to cognitive psychology and education focusing on how studies using a cognitive approach can shed light on how the reading process works To set the stage the opening chapters present information about writing systems and methods of studying reading including those that examine speeded responses to individual words as well as those that use eye movement technology to determine how sentences and short passages of text are processed The following section discusses the identification of single words by skilled readers as well as insights from studies of adults with reading disabilities due to brain damage Another section considers how skilled readers read a text silently addressing such issues as the role of sound in silent reading and how readers' eyes move through texts Detailed quantitative models of the reading process are proposed throughout The final sections deal with how children learn to read and spell and how they should be taught to do so These chapters review research with learners of different languages and those who speak different dialects of a language discuss children who develop typically as well as those who exhibit specific disabilities in reading and address questions about how reading should be taught with populations ranging from preschoolers to adolescents and how research findings have influenced education The Oxford Handbook of Reading will benefit researchers and graduate students in the fields of cognitive psychology developmental psychology education and related fields e.g. speech and language pathology who are interested in reading reading instruction or reading disorders
