Through Writing to Reading Brigid Smith, 2005-08-08

The question of how the problems of slow readers can be caught early and remedied has been much in the news lately In this very practical book for teachers and support teachers based on extensive work in the classroom Brigid Smith shows how to exploit the links between writing and reading to give children the all important experience of literacy The children with whom she works are encouraged to dictate their own stories to a helper and then to read these back From their success in this they are gradually guided towards the skills needed to decode unfamiliar text At the same time the stories increasingly acquire features characteristic of written rather than oral language and in editing them the children practice compositional skills which would otherwise be beyond their reach Brigid Smith explains how teachers can use this approach in their own classrooms with different kinds of texts with individuals with groups and with children of all abilities While her emphasis is on enjoyment and independence for the reader she also shows how the method she suggests can fulfil the requirements of the National Curriculum and how progress can be monitored for assessment purposes

Neuroscience in Education Sergio Della Sala, Mike Anderson,2012-04-05 In the past ten years there has been growing interest in applying our knowledge of the functioning of the human brain to the field of education including reading learning language and mathematics This has resulted in the development of a number of new practices in education some good some bad and some just crazy The good is nearly always sound cognitive research that has clear implications for educational practice The bad is the use of neuroscience jargon to lure the unwary and to give an apparent scientific aura to flawed educational programs with no evidence base and which no reputable neuroscientist would endorse The ugly is simplistic interpretation and misapplication of cognitive theories leading to errors in their application More and better could be done if neuroscientists and educationalists acknowledge the limits of their disciplines and start listening to each other Neuroscience in Education brings together an international group of leading psychologists neuroscientists educationalists and geneticists to critically review some of these new developments examining the science behind these practices the validity of the theories on which they are based and whether they work It will be fascinating reading for anyone involved in education including teachers psychologists neuroscientists and policy makers as well as interested parents
