Digital Image Processing Bernd Jähne, 2013-03-09 Intended as a practical guide the book takes the reader from basic concepts to up to date research topics in digital image processing Only little special knowledge in computer sciences is required since many principles and mathematical tools widely used in natural sciences are also applied in digital image processing thus the reader with a general background in natural science gets an easy access to the material presented The book discusses the following topics image acquisition and digitization linear and nonlinear filter operations edge detection local orientation and texture fast algorithms on pyramidal and multigrid data structures morphological operations to detect the shape of objects segmentation and classification Further chapters deal with the reconstruction of three dimensional objects from projections and the analysis of stereo images and image sequences with differential correlation and filter algorithms Many examples from different areas show how the reader can use digital image processing as an experimental tool for image data acquisition and evaluation in his or her research area

Neural Networks for Vision, Speech and Natural Language R. Linggard, D.J. Myers, C. Nightingale, 2012-12-06 This book is a collection of chapters describing work carried out as part of a large project at BT Laboratories to study the application of connectionist methods to problems in vision speech and natural language processing Also since the theoretical formulation and the hardware realization of neural networks are significant tasks in themselves these problems too were addressed The book therefore is divided into five Parts reporting results in vision speech natural language hardware implementation and network architectures The three editors of this book have at one time or another been involved in planning and running the connectionist project From the outset we were concerned to involve the academic community as widely as possible and consequently in its first year over thirty university research groups were funded for small scale studies on the various topics Co ordinating such a widely spread project was no small task and in order to concentrate minds and resources sets of test problems were devised which were typical of the application areas and were difficult enough to be worthy of study These are described in the text and constitute one of the successes of the project

Smart Algorithms for Multimedia and Imaging Michael N. Rychagov, Ekaterina V. Tolstaya, Mikhail Y. Sirotenko, 2021-05-05 This book presents prospective industrially proven methods and software solutions for storing processing and viewing multimedia content on digital cameras camcorders TV and mobile devices Most of the algorithms described here are implemented as systems on chip firmware or as software products and have low computational complexity and memory consumption In the four parts of the book which contains a total of 16 chapters the authors address solutions for the conversion of images and videos by super resolution depth

estimation and control and mono to stereo 2D to 3D conversion display applications by video editing the real time detection of sport episodes and the generation and reproduction of natural effects The practical principles of machine learning are illustrated using technologies such as image classification as a service mobile user profiling and automatic view planning with dictionary based compressed sensing in magnetic resonance imaging The implementation of these technologies in mobile devices is discussed in relation to algorithms using a depth camera based on a colour coded aperture the animated graphical abstract of an image a motion photo and approaches and methods for iris recognition on mobile platforms The book reflects the authors practical experience in the development of algorithms for industrial R Offers essential algorithms for the processing pipeline in multimedia devices and accompanying software tools Features advanced topics on data processing addressing current technology challenges **Towards Hybrid and Adaptive Computing** Anupam Shukla,Ritu

Tiwari,Rahul Kala,2010-09-18 Soft Computing today is a very vast field whose extent is beyond measure The boundaries of this magnificent field are spreading at an enormous rate making it possible to build computationally intelligent systems that can do virtually anything even after considering the hostile practical limitations Soft Computing mainly comprising of Artificial Neural Networks Evolutionary Computation and Fuzzy Logic may itself be insufficient to cater to the needs of various kinds of complex problems In such a scenario we need to carry out amalgamation of same or different computing approaches along with heuristics to make fabulous systems for problem solving There is further an attempt to make these computing systems as adaptable as possible where the value of any parameter is set and continuously modified by the system itself This book first presents the basic computing techniques draws special attention towards their advantages and disadvantages and then motivates their fusion in a manner to maximize the advantages and minimize the disadvantages Conceptualization is a key element of the book where emphasis is on visualizing the dynamics going inside the technique of use and hence noting the shortcomings A detailed description of different varieties of hybrid and adaptive computing systems is given paying special attention towards conceptualization and motivation Different evolutionary techniques are discussed that hold potential for generation of fairly complex systems The complete book is supported by the application of these techniques to biometrics This not only enables better understanding of the techniques with the added application base it also opens new dimensions of possibilities how multiple biometric modalities can be fused together to make effective and scalable systems

Artificial Intelligence and Soft Computing Leszek Rutkowski,Marcin Korytkowski,Rafal Scherer,Ryszard Tadeusiewicz,Lotfi A. Zadeh,Jacek M. Markov Networks in Evolutionary Computation Siddhartha Shakya,Roberto Santana,2012-04-23 Markov networks and other probabilistic graphical models have recently received an upsurge in attention from Evolutionary computation community particularly in the area of Estimation of distribution algorithms EDAs EDAs have arisen as one of the most successful experiences in the application of machine learning methods in optimization mainly due to their efficiency to solve complex real world optimization problems and their suitability for theoretical analysis This book focuses on the different steps involved in the conception implementation and application of EDAs that use Markov networks and undirected models in general It can serve as a general introduction to EDAs but covers also an important current void in the study of these algorithms by explaining the specificities and benefits of modeling optimization problems by means of undirected probabilistic models All major developments to date in the progressive introduction of Markov networks based EDAs are reviewed in the book Hot current research trends and future perspectives in the enhancement and applicability of EDAs are also covered The contributions included in the book address topics as relevant as the application of probabilistic based fitness models the use of belief propagation algorithms in EDAs and the application of Markov network based EDAs to real world optimization problems The book should be of interest to researchers and practitioners from areas such as optimization evolutionary computation and machine learning

Image Content Retargeting Alessandro Artusi,Francesco Banterle,Tunç Ozan Aydın,Daniele Panozzo,Olga Sorkine-Hornung,2016-08-05 In recent years visual devices have proliferated from the massive high resolution high contrast screens to the tiny ones on mobile phones with their limited dynamic range and color gamut The wide variety of screens on which content may be viewed creates a challenge for developers Adapting visual content for optimized viewing on all devices is called retargeting This is the first book to provide a holistic view of the subject thoroughly reviewing and analyzing the many techniques that have been developed for retargeting along dimensions such as color gamut dynamic range and spatial resolution

Spatial Vision in Humans and Robots Laurence Harris,Michael Jenkin,1993 A book of great interest both to biological researchers and also to designers of robots and computer vision systems

The Human Semantic Potential Terry Regier,1996 Drawing on ideas from cognitive linguistics connectionism and perception The Human Semantic Potential describes a connectionist model that learns perceptually grounded semantics for natural language in spatial terms Languages differ in the ways in which they structure space and Regier's aim is to have the model perform its learning task for terms from any natural language The system has so far succeeded in learning spatial terms from English German Russian

Japanese and Mixtec The model views simple movies of two dimensional objects moving relative to one another and learns to classify them linguistically in accordance with the spatial system of some natural language The overall goal is to determine which sorts of spatial configurations and events are learnable as the semantics for spatial terms and which are not Ultimately the model and its theoretical underpinnings are a step in the direction of articulating biologically based constraints on the nature of human semantic systems Along the way Regier takes up such substantial issues as the attraction and the liabilities of PDP and structured connectionist modeling the problem of learning without direct negative evidence and the area of linguistic universals which is addressed in the model itself Trained on spatial terms from different languages the model permits observations about the possible bases of linguistic universals and interlanguage variation **Introduction to**
