Building Vocabulary

Answer the following questions on a separate sheet of paper.

1. What is the difference between magma and lava?

Figure 1
Diagram of Converging Boundaries
 Convergent plate boundaries occur where two oceanic plates collide or where an oceanic plate collides with a continental plate. In both situations, an oceanic plate sinks beneath a trench. Heat from the sink causes the magma, which then erupts on the surface as lava.

Converging Boundaries Most converging plate boundaries where oceanic plates collide. Volcanoes may form where an oceanic plate collides with another oceanic plate or where an oceanic plate collides with a continental plate. Figure 1 shows how converging boundaries work.

Many volcanoes occur where oceanic plates collide. Through collisions, one plate sinks beneath a deep trench. The magma that rises from the sinking plate moves toward the surface. Eventually, the magma breaks through the ocean floor, creating volcanoes.

The resulting volcanoes create a string of islands called an island arc. The curve of an island arc follows the curve of its deep-ocean trench. Major island arcs include Japan, New Zealand, Indonesia, the Philippines, the Aleutians, and the Caribbean Islands.

Volcanoes also occur where an oceanic plate is subducted beneath a continental plate. Collisions of this type produced the volcanoes of the Andes Mountains in South America and the volcanoes of the Pacific Northwest in the United States.

Figure 2 How did the volcanoes in the Andes Mountains form?

 Science We have reason to believe that the earth has been undergoing a long and complex development proceeding from a
 comparatively homogeneous and simple structure to one much more complex Some five billion years ago there was only a
 cloud of matter in the form of dust and gas Later an earth gradually evolved and still later oceans continents and a primitive
 atmosphere formed The first lifelike structure gradually developed eons ago from comparatively complex minerals And a
 human animal appeared only an instant ago in geologic time the improbable product of an incredibly long sequence of
 ancestral events which began with the appropriate sized cloud at a certain distance from a star such are the broad but
