Recent Advances In Partial Differential Equations:

Recent Advances in Partial Differential Equations Miguel Ángel Herrero, Enrique Zuazua, 1994 This is an up to date survey of current research with partial differential equations Topics discussed include the evolution of hypersurfaces by mean curvature flow nonlinear wave equations including harmonic maps and blow up mechanisms for semilinear parabolic equations

Recent Advances in Partial Differential Equations, Venice 1996 Peter D. Lax, L. Nirenberg, Renato Spigler, 1998 Lax and Nirenberg are two of the most distinguished mathematicians of our times Their work on partial differential equations PDEs over the last half century has dramatically advanced the subject and has profoundly influenced the course of mathematics A huge part of the development in PDEs during this period has either been through their work motivated by it or achieved by their postdocs and students A large number of mathematicians honored these two exceptional scientists in a week long conference in Venice June 1996 on the occasion of their 70th birthdays This volume contains the proceedings of the conference which focused on the modern theory of nonlinear PDEs and their applications Among the topics treated are turbulence kinetic models of a rarefied gas vortex filaments dispersive waves singular limits and blow up solutions conservation laws Hamiltonian systems and others The conference served as a forum for the dissemination of new scientific ideas and discoveries and enhanced scientific communication by bringing together such a large number of scientists working in related fields The event allowed the international mathematics community to honor two of its outstanding members

Recent Advances in Partial Differential Equations and Applications Vicențiu D. Rădulescu, Adélia

Sequeira, Vsevolod A. Solonnikov, 2016-06-28 This volume contains the proceedings of the International Conference on Recent Advances in PDEs and Applications in honor of Hugo Beirão da Veiga's 70th birthday held from February 17-21 2014 in Levico Terme Italy The conference brought together leading experts and researchers in nonlinear partial differential equations to promote research and to stimulate interactions among the participants The workshop program testified to the wide ranging influence of Hugo Beirão da Veiga on the field of partial differential equations in particular those related to fluid dynamics In his own work da Veiga has been a seminal influence in many important areas Navier Stokes equations Stokes systems non Newtonian fluids Euler equations regularity of solutions perturbation theory vorticity phenomena and nonlinear potential theory as well as various degenerate or singular models in mathematical physics This same breadth is reflected in the mathematical papers included in this volume

Some Recent Advances in Partial Difference Equations Eugenia N. Petropoulou, 2010 Lately there is an increasing interest in partial difference equations demonstrated by the enormous amount of research papers devoted to them The initial reason for this increasing interest was the development of computers and the area of numerical analysis

Special Issue on Recent Advances in Partial Differential Equations Ky Fan, 2006

Recent Advances in PDEs: Analysis, Numerics and Control Anna Doubova, Manuel González-Burgos, Francisco Guillén-González, Mercedes Marín Beltrán, 2018-11-02 This book contains the main results of the talks given at the workshop

Recent Advances in PDEs Analysis Numerics and Control which took place in Sevilla Spain on January 25 27 2017 The work comprises 12 contributions given by high level researchers in the partial differential equation PDE area to celebrate the 60th anniversary of Enrique Fern ndez Cara University of Sevilla The main topics covered here are Control and inverse problems Analysis of Fluid mechanics and Numerical Analysis The work is devoted to researchers in these fields

Recent Advances in Harmonic Analysis and Partial Differential Equations Andrea R. Nahmod, 2012 This volume is based on the AMS Special Session on Harmonic Analysis and Partial Differential Equations and the AMS Special Session on Nonlinear Analysis of Partial Differential Equations both held March 12 13 2011 at Georgia Southern University Statesboro Georgia as well as the JAMI Conference on Analysis of PDEs held March 21 25 2011 at Johns Hopkins University Baltimore Maryland These conferences all concentrated on problems of current interest in harmonic analysis and PDE with emphasis on the interaction between them This volume consists of invited expositions as well as research papers that address prospects of the recent significant development in the field of analysis and PDE The central topics mainly focused on using Fourier spectral and geometrical methods to treat wellposedness scattering and stability problems in PDE including dispersive type evolution equations higher order systems and Sobolev spaces theory that arise in aspects of mathematical physics The study of all these problems involves state of the art techniques and approaches that have been used and developed in the last decade The interrelationship between the theory and the tools reflects the richness and deep connections between various subjects in both classical and modern analysis

Recent Advances in Numerical Methods for Partial Differential Equations and Applications Xiaobing Feng, Tim P. Schulze, 2002 This book is derived from lectures presented at the 2001 John H Barrett Memorial Lectures at the University of Tennessee Knoxville The topic was computational mathematics focusing on parallel numerical algorithms for partial differential equations their implementation and applications in fluid mechanics and material science Compiled here are articles from six of nine speakers Each of them is a leading researcher in the field of computational mathematics and its applications A vast area that has been coming into its own over the past 15 years computational mathematics has experienced major developments in both algorithmic advances and applications to other fields These developments have had profound implications in mathematics science engineering and industry With the aid of powerful high performance computers numerical simulation of physical phenomena is the only feasible method for analyzing many types of important phenomena joining experimentation and theoretical analysis as the third method of scientific investigation The three aspects applications theory and computer implementation comprise a comprehensive overview of the topic Leading lecturers were Mary Wheeler on applications Jinchao Xu on theory and David Keyes on computer implementation Following the tradition of the Barrett Lectures these in depth articles and expository discussions make this book a useful reference for graduate students as well as the many groups of researchers working in advanced computations including engineering and computer scientists

Recent Advances in Differential Equations H-H Dai, P.L.

Sachdev, 2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997. Researchers from around the world attended including representatives from the US, Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong. This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China. Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations. Topics include Recent Advances in Nonlinear Partial Differential Equations and Applications. Luis López Bonilla, 2007. The articles of this book are written by leading experts in partial differential equations and their applications who present overviews here of recent advances in this broad area of mathematics. The formation of shocks in fluids, modern numerical computation of turbulence, the breaking of the Einstein equations in a vacuum, the dynamics of defects in crystals, effects due to entropy in hyperbolic conservation laws, the Navier Stokes and other limits of the Boltzmann equation, occupancy times for Brownian motion in a two dimensional wedge and new methods of analyzing and solving integrable systems are some of this volume's subjects. The reader will find an exposition of important advances without a lot of technicalities and with an emphasis on the basic ideas of this field.
