Recent Advances In Statistics Papers In Honor Of Herman Chernoff On His Sixtieth Birthday:

Recent Advances in Statistics M. Haseeb Rizvi, Jagdish S. Rustagi, David Siegmund, 2014-05-10 *Recent Advances in Statistics Papers in Honor of Herman Chernoff on His Sixtieth Birthday* is a collection of papers on statistics in honor of Herman Chernoff on the occasion of his 60th birthday. Topics covered range from sequential analysis including designs to optimization including control theory nonparametrics including large sample theory and statistical graphics. Comprised of 27 chapters, this book begins with a discussion on optimal stopping of Brownian motion followed by an analysis of sequential design of comparative clinical trials. A two sample sequential test for shift with one sample size fixed in advance is then presented. Subsequent chapters focus on set valued parameters and set valued statistics, large deviations of the maximum likelihood estimate in the Markov chain case, the limiting behavior of multiple roots of the likelihood equation and optimal uniform rate of convergence for nonparametric estimators of a density function and its derivatives. The book concludes by considering significance and confidence levels, closed regions and models and discrete distributions. This monograph should be of interest to students, researchers and specialists in the fields of mathematics and statistics. Research Developments in Probability And Statistics Madan Lal Puri, Edgar Brunner, Manfred Denker, 1996-01-01 On the occasion of the 65th birthday of Professor Madan L Puri, the authors of this Festschrift pay their tribute to his scientific achievements in statistics. This volume reflects a selective survey of leading contemporary scientific trends and developments that are significantly related to ideas expressed and pursued in Madan L Puri's work in statistics and related fields. The wide spectrum of scientific interest which characterizes Professor Puri's scientific activity is thus illuminated. The choice of papers offered combines fundamental principles with interesting applications selected for their originality and insight and for their influence on the modern approach to statistics, probability and related fields. Computational Aspects of Model Choice Jaromir Antoch, 2012-12-06 Although no one is probably too enthused about the idea, it is a fact that the development of most empirical sciences to a great extent depends on the development of data analysis methods and techniques which, due to the necessity of applications of computers for that purpose, actually means that it practically depends on the advancements and orientation of computational statistics. This volume contains complete texts of the lectures held during the Summer School on Computational Aspects of Model Choice organized jointly by Charles University Prague and International Association for Statistical Computing IASC on July 14-19, 1991 in Prague. Main aims of the Summer School were to review and analyse some of the recent developments concerning computational aspects of the model choice as well as their theoretical background. The topics covered include the problems of the change point detection, robust estimation and its computational aspects, classification using binary trees, stochastic approximation and optimization including the discussion about available software, computational aspects of graphical model selection and multiple hypotheses testing. The bridge between these different approaches is formed by the survey paper about statistical applications of artificial intelligence. Estimation and Inferential Statistics

Pradip Kumar Sahu,Santi Ranjan Pal,Ajit Kumar Das,2015-11-03 This book focuses on the meaning of statistical inference and estimation Statistical inference is concerned with the problems of estimation of population parameters and testing hypotheses Primarily aimed at undergraduate and postgraduate students of statistics the book is also useful to professionals and researchers in statistical medical social and other disciplines It discusses current methodological techniques used in statistics and related interdisciplinary areas Every concept is supported with relevant research examples to help readers to find the most suitable application Statistical tools have been presented by using real life examples removing the fear factor usually associated with this complex subject The book will help readers to discover diverse perspectives of statistical theory followed by relevant worked out examples Keeping in mind the needs of readers as well as constantly changing scenarios the material is presented in an easy to understand form **Recent Advances in Statistics and Probability** J. Graphics Statistics Cleveland,1988-07-08 The essential characteristic of a dynamic graphical method is the direct manipulation of elements of a graph on a computer screen which in high performance implementations the elements change virtually instantaneously on the screen This book contains a collection of papers about dynamic graphics dating from the late 1960s to 1988 Although technology has advanced considerably the fundamental ideas about basic graphical principles and data analytic goals are still relevant today Practical Nonparametric and Semiparametric Bayesian Statistics Dipak D.

Dey,Peter Müller,Debajyoti Sinha,2012-12-06 A compilation of original articles by Bayesian experts this volume presents perspectives on recent developments on nonparametric and semiparametric methods in Bayesian statistics The articles discuss how to conceptualize and develop Bayesian models using rich classes of nonparametric and semiparametric methods how to use modern computational tools to summarize inferences and how to apply these methodologies through the analysis of case studies **Exploring Data Tables, Trends, and Shapes** David C. which any statistical library should consider seriously *The Statistician* This newly available and affordably priced paperback version of *Exploring Data Tables Trends and Shapes* presents major advances in exploratory data analysis and robust regression methods and explains the techniques relating them to classical methods The book addresses the role of exploratory and robust techniques in the overall data analytic enterprise and it also presents new methods such as fitting by organized comparisons using the square combining table and identifying extreme cells in a sizable contingency table with probabilistic and exploratory approaches The book features a chapter on using robust regression in less technical language than available elsewhere Conceptual support for each technique is also provided Theoretical Statistics Robert W.

Keener,2010-09-08 Intended as the text for a sequence of advanced courses this book covers major topics in theoretical statistics in a concise and rigorous fashion The discussion assumes a background in advanced calculus linear algebra probability and some analysis and topology Measure theory is used but the notation and basic results needed are presented in an initial chapter on probability so prior knowledge of these topics is not essential The presentation is designed to expose students to as many of the central ideas and topics in the discipline as possible balancing various approaches to inference as well as exact numerical and large sample methods Moving beyond more standard material the book includes chapters introducing bootstrap methods nonparametric regression equivariant estimation empirical Bayes and sequential design and analysis The book has a rich collection of exercises Several of them illustrate how the theory developed in the book may be used in various applications Solutions to many of the exercises are included in an appendix *Quantitative Psychology* Marie Wiberg,Steven Culpepper,Rianne Janssen,Jorge González,Dylan Molenaar,2019-05-17 This proceedings volume highlights the latest research and developments in psychometrics and statistics This book compiles and expands on selected and peer reviewed presentations given at the 83rd Annual International Meeting of the Psychometric Society IMPS organized by Columbia University and held in New York USA July 9th to 13th 2018 The IMPS is one of the largest international meetings on quantitative measurement in education psychology and the social sciences The last couple of years it has attracted more than 500 participants and more than 250 paper presentations from researchers around the world Leading experts in the world and promising young researchers have written the 38 chapters The chapters address a large variety of topics including but not limited to item response theory multistage adaptive testing and cognitive diagnostic models This volume is the 7th in a series of recent volumes to cover research presented at the IMPS
