Recent advances in the development and germination of seeds

Edited by R. B. Taylorson

Plenum, NY (NATO ARI Series), 1989. ISBN 0-306-43521-7 \$69.50 H/b

This book is a collection of the main papers, given at the Third International Workshop held in Williamsburg, USA, in 1989. Collections of the short papers and abstracts of poster presentations from the meeting were published earlier.

The book begins with a review by M. Black highlighting the important contributions that study of seeds has made to our understanding of plant development and control mechanisms. It ends with a summary by A. M. Mayer of the current state of play and a personal view of possible future developments. Both these chapters set the book nicely in context and clearly demonstrate the major contributions that studies of seeds have made to the mechanisms of plant development. In between these two 'pieces of bread' is a filling which is 'meat' for molecular biologists, biochemists and physiologists to get their teeth into. To a greater extent than in many reports of seed biology meetings this one emphasized the mechanistic aspects of seed biology and outlined a number of new approaches.

It is initially difficult to find one's way around this collection of papers. From the content of the chapters a grouping into 'seed development' as opposed to 'dormancy/germination' events could have been adopted; however, chapters on each appear to be mixed, it seems, at random.

Chapters on the use of transgenic plants and mutants indicate the growing importance of these approaches in unravelling the mechanisms controlling seed development, dormancy/germination. There is a comprehensive review of phytin in seeds, sites of and mechanisms of deposition and an outline of improved analytical procedures and techniques. An excellent discussion on membrane behaviour is included using pollen as a model system. Fourier transform infrared spectroscopy is used to measure gel to crystalline phase changes though its potential for studies on seeds has yet to be fully evaluated.

There are chapters on dormancy, demonstrating control of acid-soluble protein synthesis by ABA in dormant grain. There is an elegant analysis of the complex germination responses to light based on the finding that phytochrome exists as a molecular dimer.

A descriptive model based on a 'dose-response' approach to integrate the effect of light and nitrate is also outlined. There are two discussions of the regulation of metabolism in seeds, one on the relationships and interactions between phytochrome and growth-regulating substances and one outlining the potential role of Ca^{2+} as a 'stimulus-response' coupler in germination. Recent work suggests that the definition of differences in metabolism between dormant and non-dormant seeds is still elusive, though relationships between dormancy breaking activity of chemicals and the lipophilicity and/or molecular size are suggested. Apart from a few papers on water impermeability of seed coats in relation to germination and on the mechanisms of priming (or should this be more precisely, mechanisms of germination) there is little, surprisingly, on the role of water in seeds in relation to the initiation and control of cell elongation. Nor is there much on the mechanisms of seed longevity. Perhaps the next Conference in Angers in 1992 will address these issues.

Virtually all of the papers are concerned with 'natural' seeds though there is an authoritative review on the production of somatic embryos of agricultural and horticultural crop species and on the difficulties biologists face in developing a reliable synthetic seed technology.

Clearly, there is much in this book for those concerned with identifying mechanisms underlying seed developmental and germination response. But what is the potential value of the book for agronomists interested in exploiting such knowledge to improve seed quality and manipulate seed germination and seedling emergence? Chapters on changes in plant water status at specific stages on protein deposition and subsequent effects on germination performance, on dehydration tolerance/membrane behaviour, seed coat characteristics in relation to water uptake, discussions of the mechanisms underlying recalcitrant seed responses to drying, mechanisms of seed priming and the effects of dormancy-breaking chemicals in relation to their molecular size and lipophilicity provide good background information and useful pointers. Surprisingly, there is no dis-

Recent Advances In The Development And Germination Of Seeds:

Recent Advances in the Development and Germination of Seeds R.B. Taylorson, 2012-12-06 These Proceedings are a product of the International Workshop on Seeds held in Williamsburg Virginia USA at the College of William and Mary during the week of August 6-11 1989 Sixty eight participants attended The location provided a scenic and historical setting for the excellent work presented Good facilities and amenities also contributed to the success of the meeting The Proceedings present the substance of the main lectures given at this meeting In addition there were 29 brief paper presentations and 30 poster presentations which have been summarized in abstract form in a separate publication This meeting represents the third such meeting of a diverse group of scientists interested in the behavior of seeds both in an agricultural sense and as tools for the advancement of more particular subject matter The first meeting was held in Jerusalem Israel in 1980 and the second in Wageningen The Netherlands in 1985 A fourth meeting is being planned The Editor and Organizer wishes to thank not only the contributors to this volume for their efforts but also all the other participants whose combined efforts made this meeting a great success

Seeds, 3rd Edition Robert S Gallagher, 2013-12-06 The 3rd edition of *Seeds The Ecology of Regeneration in Plant Communities* highlights the many advances in the field of seed ecology and its relationship to plant community dynamics that have taken place in recent years The new edition also features chapters on seed development and morphology seed chemical ecology implications of climate change on regeneration by seed and the functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology

Recent Advances in Research and Development for Vegetable Crops Under Protected Cultivation Giao Nguyen, Zora Singh, 2024-08-05 Protected cropping shelters crops from extreme climatic conditions by modifying the internal growing conditions in their favor The technology has widely been used for vegetable crops in different climates such as temperate tropical subtropical arid and semi arid regions As climate change is projected to become more severe in the near future the resulting adverse weather conditions such as higher temperatures more frequent heatwaves more variable rainfall patterns and cyclones will affect vegetable production in turn affecting crop growth yield produce quality and economic return of growers The demand for protected cultivation will increase to ensure sustainable production and a stable supply of fresh horticultural produce

Seeds Handbook Babasaheb B. Desai, 2004-04-22 Revised and expanded throughout this latest edition of the bestselling *Seeds Handbook* Biology Production Processing and Storage includes valuable information on all areas of seed biology production and processing The author one of the most respected and prolific scientists in the field identifies current developments in seed testing and certification storage transportation and distribution Tracking the evolution and advancement of seed industries and technologies he fully covers the development and supply of high quality seeds for every key agronomic and horticulture crop Contains methods to enhance the genetic and physiological characteristics of more than 80 major and minor crops With an abundance of current

research and additional figures and illustrations this edition of the Seeds Handbook offers chapters on modern biotechnological issues such as the production of synthetic seeds loss reduction biotechnologies and new strategies in the seed production industry It provides in depth information on burgeoning areas of seed science including tissue culture and cellular totipotency induction and regeneration protocols development and maturation hormone requirements drying and storage of somatic embryos protective encapsulation and crop applications With an eye to the future it looks at challenges in the provision and enhancement of seeds for crop plants practical methods of seed production and micropropagation genetically modified seeds and world food security Recent Advances in the Conservation and Utilization of Genetic Resources Nathan Russell,1988 *Principles of Seed Science and Technology* Lawrence O. Copeland,Miller F. McDonald,2012-12-06 This Fourth Edition of Principles of Seed Science and Technology like the first three editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds The first nine chapters present the seed as a biological system and cover its origin development composition function and sometimes nonfunction performance and ultimate deterioration The last nine chapters present the fundamentals of how seeds are produced conditioned evaluated and distributed in our modern agricultural society Two new chapters have been added in this fourth edition one on seed ecology and the second on seed drying Finally revisions have been made throughout to reflect changes that have occurred in the seed industry since publication of the Third Edition Because of the fundamental importance of seeds to both agriculture and to all of society we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves We hope that this feeling will be communicated to our readers Furthermore we have attempted to present information in a straight forward easy to read manner that will be easily understood by students and lay persons alike Special care has been taken to address both current state of the art as well as future trends in seed technology **Handbook of Seed Physiology** Roberto Benez-Arnold,Rodolfo S?nchez,2004-09-21 The latest findings in seed physiologydiscussed as they relate to agricultural problems Presenting the latest findings in the area of seed physiology as well as the practical applications of that knowledge in the field the Handbook of Seed Physiology Applications to Agriculture provides a comprehensive view of seed biology and it *Nitric Oxide in Plant Growth, Development and Stress Physiology* Lorenzo Lamattina,Joe C. Polacco,2007-01-30 Recent advances in the study of nitric oxide NO biology biochemistry molecular biology and physiology in plants are presented in this book providing an overview of current understanding of the NO actions involved in adaptive responses of plant fitness to environmental constraints The special emphasis is on NO dependent signalling molecular adjustments and targets as key elements in plant growth development and stress physiology The first part of the book is devoted to the description of key features related to NO biochemistry synthesis and metabolism and the modes of action involved The second part covers the functionality of NO in three central nodes of the plant life cycle growth development and stress physiology Finally a detailed analysis of the

advantages and disadvantages of the use of fluorometric detection of NO in plant research brings to light information necessary for understanding the limitations of the method

Soil Science: Fundamentals to Recent Advances Amitava Rakshit, S.K Singh, P.C. Abhilash, Asim Biswas, 2021-07-30 This compilation has been designed to provide a comprehensive source of theoretical and practical update for scientists working in the broad field of soil science The book explores all possible mechanisms and means to improve nutrient use efficiencies involving developing and testing of nanofertilizers developing consortia based microbial formulations for mobilization of soil nutrients and engineering of nutrient efficient crops using molecular biology and biotechnological tools This is an all inclusive collection of information about soil science This book is of interest to teachers researchers soil scientists capacity builders and policymakers Also the book serves as additional reading material for undergraduate and graduate students of soil science quantitative ecology earth sciences GIS and geodetic sciences as well as geologists geomorphologists hydrologists and landscape ecology National and international agriculture and soil scientists policy makers will also find this to be a useful read

Horticultural Reviews, Volume 16 Jules Janick, 2010-04-29 Horticultural Reviews presents state of the art reviews on topics in horticultural science and technology covering both basic and applied research Topics covered include the horticulture of fruits vegetables nut crops and ornamentals These review articles written by world authorities bridge the gap between the specialized researcher and the broader community of horticultural scientists and teachers

Reviewing **Recent Advances In The Development And Germination Of Seeds**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is actually astonishing. Within the pages of "**Recent Advances In The Development And Germination Of Seeds**," an enthralling opus penned by a highly acclaimed wordsmith, readers attempt an immersive expedition to unravel the intricate significance of language and its indelible imprint on our lives. Throughout this assessment, we shall delve into the book's central motifs, appraise its distinctive narrative style, and gauge its overarching influence on the minds of its readers.

FAQs About Recent Advances In The Development And Germination Of Seeds Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer webbased readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Recent Advances In The Development And Germination Of Seeds is one of the best book in our library for free trial. We provide copy of Recent Advances In The Development And Germination Of Seeds in digital format, so the resources that you find are reliable.
