Clinical Blood Pool MR Imaging Tim Leiner, Mathias Goyen, Martin Rohrer, Stefan O. Schönberg, 2009-10-27 Magnetic resonance angiography has made great strides with continuing improvements in hardware pulse sequencing and know how allowing ever increasing speed resolution and suppression of artifacts However an inherent physical barrier has always been limited SNR Gadolinium contrast agents help to increase SNR by facilitating T1 relaxation but they can be injected only at a finite rate and at a limited molar dose and there is a rapid drop in concentration following the brief arterial phase due to redistribution into the extracellular fluid compartment With its sixfold increase in T1 relaxivity blood pool distribution and longer serum half life Vasovist represents a new breakthrough which promises to revolutionize MRA image quality once again This excellent treatise on Vasovist created by a team of exceptional faculty who are pioneers in MR angiography covers

the basic techniques safety efficacy image processing and pharmacoeconomic details to successfully implement a new level of MRA image quality with this new contrast agent In addition to improving all the usual arterial phase MRA applications the blood pool distribution opens up new possibilities including detecting internal bleeding and imaging stent graft endoleaks which are reviewed in detail In the complex competitive field of cardiovascular imaging this book articulates the cutting edge in imaging vascular disease **Reference Manual** ,2007 **Patient Centered Care in Medical Imaging and**
