Minerals and Reactions at the Atomic Scale Peter R. Buseck, 2018-12-17 Volume 27 of Reviews in Mineralogy provides a background to the TEM as a mineralogical tool to give an introduction to the principles underlying its operation and to explore mineralogical applications and ways in which electron microscopy can augment our knowledge of mineral structures chemistry and origin Much time will be devoted to mineralogical applications It provides sufficient information to

allow mineralogists and petrologists to have an informed understanding of the data produced by transmission electron microscopy and to have enough knowledge and experience to undertake initial studies on their own The opening chapters cover the principles of electron microscopy and chemical analysis using the TEM while the following chapters consider mineralogical petrological and geochemical applications and their implications for both low and high temperature geological environments The Mineralogical Society of America sponsored a short courses in conjunction with their annual meetings with the Geological Society of America and this volume represents the proceedings of the eighteenth in the sequence This TEM course was convened October 23 25 1992 at Hueston Woods State Park College Comer Ohio

The Rise of Animals and Descent of Man, 1660-1800 John Morillo, 2017-11-22 The Rise of Animals and the Descent of Man illuminates compelling historical connections between a current fascination with animal life and the promotion of the moral status of non human animals as ethical subjects deserving our attention and respect and a deep interest in the animal as agent in eighteenth century literate culture It explores how writers including well known poets important authors who mixed art and science and largely forgotten writers of sermons and children s stories all offered innovative alternatives to conventional narratives about the meaning of animals in early modern Europe They question Descartes claim that animals are essentially soulless machines incapable of thought or feelings British writers from 1660 1800 remain informed by Cartesianism but often counter it by recognizing that feelings are as important as reason when it comes to defining animal life and its relation to human life This British line of thought deviates from Descartes by focusing on fine feeling as a register of moral life empowered by sensibility and sympathy but this very stance is complicated by cultural fears that too much kindness to animals can entail too much kinship with them fears made famous in the later reaction to Darwinian evolution The Rise of Animals uncovers ideological tensions between sympathy for animals and a need to defend the special status of humans from the rapidly developing Darwinian perspective The writers it examines engage in complex negotiations with sensibility and a wide range of philosophical and theological traditions Their work anticipates posthumanist thought and the challenges it poses to traditional humanist values within the humanities and beyond The Rise of Animals is a sophisticated intellectual history of the origins of our changing attitudes about animals that at the same time illuminates major currents of eighteenth century British literary culture

Target Detection by Marine Radar John N. Briggs, 2004-12-03 Radar is a legal necessity for the safe navigation of merchant ships and within vessel traffic services is indispensable to the operation of major ports and harbours Target Detection by Marine Radar concentrates solely on civil marine operations and explains how marine surveillance radars detect their targets The book is fully illustrated and contains worked examples to help the reader understand the principles underlying radar operation and to quantify the importance of factors such as the technical features of specific equipment the weather target reflection properties and the ability of the operator The precision with which targets are positioned on the radar screen and with which their progress is

tracked or predicted depends on how definitely they have been detected therefore a whole chapter has been devoted to the issue of accuracy The various international regulations governing marine radar are examined a brief historical background is given to modern day practice and the book closes with a discussion of the ways in which marine radar may develop to meet future challenges
