Sialic Acids and Sialoglycoconjugates in the Biology of Life Health and Disease enables the reader to understand the role of sialylation as a post translational modification The book provides insights on the latest knowledge in the field of sialoglycobiology Sialic acids as terminal residues of oligosaccharide chains play crucial roles in several cellular recognition events Synthesized post translationally they play an important role in recognition signaling immunological response and cell cell interaction Improper sialylations have been associated with several diseases including cancer In the post genomics and proteomics era sialoglybiology has become more and more important in deciphering health and disease conditions Discusses the sialic acids and their role in different diseases other than cancer Provides an understanding of sialylations as post translational modifications PTM Demonstrates the impact sialylation has on infectious diseases the autoimmune system and health Gives insights on the importance of sialic acid biology through animal models **Biology and Pathology of Astrocyte-Neuron Interactions** Sergey Fedoroff, Bernhard H.J. Juurlink, J. Ronald Doucette, 2013-06-29 This volume is made up of papers presented at the Second International Altschul Symposium Biology and Pathology of Astrocyte Neuron Interactions The symposium was held in Saskatoon Canada at the University of Saskatchewan in May 1992 in memory of Rudolf Altschul a graduate of the University of Prague and a pioneer in the fields of the biology of the vascular and nervous systems Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The Altschul Symposia were made possible by an endowment left by Anni Altschul and by other contributions The symposia are held biennially One of the greatest challenges for present day scientists is to uncover the mechanisms of brain function Although cellular anatomy of the nervous system has already been well outlined and indeed was delineated by the beginning of the century experimental analysis of the function of the brain is relatively recent The framework of the brain is made up of stellate cells the astrocytes which are interconnected by means of their processes thus presenting a meshwork through which the neurons send their axons accompanied by oligodendrocytes Microglia are distributed throughout the brain *Biology Bulletin of the Academy of Sciences of the USSR.
