A Second Course in Computer Science with Pascal McCracken, 1988-08-02 *Second Course in Computer Science with Pascal* McCracken, 1987 This new text introduces students of computer science to the theory implementation and applications of data structures and algorithms Important features of this book include an abstract data type ADT approach and informally analyzed implementations using the Big Oh notation There is a strong emphasis on program readability a point which is made in the first chapter and reinforced by example throughout Recursion is also stressed and a chapter is devoted to its explanation Clear tables and figures are used throughout the text and there are end of chapter exercises and suggestions for further study *A Second Course in Computer Science with MODULA-2* Daniel D. McCracken, William I. Salmon, 1987 Covering thoroughly the central subject of computer science data structures and algorithms this text offers a practical introduction to theory implementation and applications using the Abstract Data Type approach For each of the major data types it provides a definition in terms of objects and operations an illustration of its use and at least one method of implementation Specific topics include parsing simulation expression simplification BNF and backtracking Most implementations are analyzed informally through the Big Oh notation introduced in the first chapter Each discussion is followed by larger applications and overviews of related issues Special emphasis is placed on recursion which is fully explained and used to clarify other concepts in the book In addition program readability is also stressed and reinforced Throughout the superiority of Modula 2 over earlier languages is fully exploited Exercises comprise almost 15% of the text
